About Us

As one of the oldest faculties at UGM, the Faculty of Pharmacy has a long history of graduating alumni with excellent performances in various pharmacy fields. It continuously maintains its tradition by graduating students with qualifications to study and work abroad. In 2021, it launched its IUP to fulfill the global need for citizens that can work across borders.

Many multinational pharmaceutical companies have been expanding to compete for the Indonesian market. Thus, it is important to provide higher education in pharmacy for globally-oriented students.

The IUP Pharmacy is an integrated part of an undergraduate pharmacy program in the Faculty of Pharmacy UGM. It adopts outcome-based education to ensure its graduate quality. Its graduates are set to have the ability to pursue a further career in clinics, industries, or laboratories.

IUP Pharmacy students will learn basic pharmacy courses according to the existing curriculum in the first and second years. They will engage in international exposure in the third and fourth years through short programs and mandatory exchange programs at overseas partner universities in Malaysia, Thailand, Taiwan, Japan, Germany, and the Netherlands to support their studies.

International exposure

The IUP Pharmacy students are expected to attend a mandatory exchange program for (1)-6 months at international partner universities. The program will include attending regular classes or participating in research assignments under joint supervision between UGM and partner universities. The students are also encouraged to attend international short programs (3-4 weeks), including attending lecture series, summer courses, conferences, or seminars.

Facilities

- Modern classrooms
- Integrated research laboratories
