

MODULE HANDBOOK

BACHELOR IN PHARMACY FACULTY OF PHARMACY UNIVERSITAS GADJAH MADA 2022

TABLE OF CONTENTS

TABLE OF CONTENTS	1
Pharmaceutical Biochemistry (2 Credits/3.4 ECTS)	5
Cell Biology-Microbiology (3 Credits/5.1 ECTS)	7
Pharmaceutics 1 (2 Credits/3.4 ECTS)10	C
Physical Pharmacy I (2 Credits/3.4 ECTS)12	2
Basic Pharmaceutical Chemistry (2 Credits/3.4 ECTS)14	4
Organic Chemistry I (2 Credits/3.4 ECTS)16	5
Pharmaceutical Biochemistry Practical Work (1 Credits/1.7 ECTS)	7
Cell Biology-Microbiology Practical Work (1 Credits/1.7 ECTS)	Э
Basic Pharmaceutical Chemistry Practical Work (1 Credits/1.7 ECTS)22	1
Human Physiology Anatomy (2 Credits/3.4 ECTS) 23	3
Human Physiology Anatomy Practical Work (1 Credits/1.7 ECTS)	5
Molecular Biology (2 Credits/3.4 ECTS)	7
Pharmacology I (2 Credits/3.4 ECTS))
Pharmaceutics II (1 Credits/1.7 ECTS)	2
Pharmaceutics I (2 Credits/FAF 221107)	2
Physical Pharmacy II (1 Credits/1.7 ECTS)	4
Physical Pharmacy I (FAF 221108)	4
Social and Behavioral Sciences of Pharmacy (2 Credits/3.4 ECTS)	5
Analytical Chemistry I (1 Credits/1.7 ECTS)	3
Organic Chemistry II (2 Credits/3.4 ECTS)40)
Pharmacy Management (2 Credits/3.4 ECTS)42	1
Molecular Biology Practical Work (1 Credits/1.7 ECTS)	3
Pharmaceutics Practical Work II (1 Credits/1.7 ECTS)46	5
Physical Pharmacy Practical Work II (1 Credits/1.7 ECTS)48	3
Analytical Chemistry Practical Work I (1 Credits/1.7 ECTS)49	Э
Organic Chemistry Practical Work II (1 Credits/1.7 ECTS)52	1
Clinical Pharmacokinetics-TDM (2 Credits/3.4 ECTS)74	1
Pharmacotherapy I (2 Credits/3.4 ECTS)79	Э
Formulation and Technology of Semisolid-liquid Dosage Form (2 Credits/3.4 ECTS)82	1
Chromatography (2 Credits/3.4 ECTS)83	3
Formulation and Technology of Semisolid-liquid Dosage Form Practice Laboratory (2 Credits/3.4 ECTS). 85	5
Product Stability (2 Credits/3.4 ECTS)90	C
Toxicology (2 Credits/3.4 ECTS)92	2
Biopharmaceutics (2 Credits/3.4 ECTS)110	C

Drug Education and Information (2 Credits/3.4 ECTS)	112
Prescription (2 Credits/3.4 ECTS)	114
Pharmacognosy - Phytochemistry (2 Credits/3.4 ECTS)	116
Pharmacotherapy II (2 Credits/3.4 ECTS)	118
Prescription (2 Credits/3.4 ECTS)	120
Pharmaceutical Immunology (1 Credits/1.7 ECTS)	122
Pharmaceutical Services (3 Credits/5.1 ECTS)	124
Laboratory Practice in Prescription (1 Credits/1.7 ECTS)	126
Laboratory Practice in Biopharmaceutics (1 Credits/1.7 ECTS)	128
Laboratory Practice in Pharmacognosy - Phytochemistry (1 Credits/1.7 ECTS)	130
Laboratory Practice in Prescription (1 Credits/1.7 ECTS)	132
Pharmaceutical Immunology Practicum (1 Credits/1.7 ECTS)	134
Laboratory Practice in Quality Assurance for Medical Devices and Cosmetics (1 Credits/1.7 ECTS)	137
Radiopharmacy and Chemotherapy (2 Credits/3.4 ECTS)	139
Pharmaceutical Biotechnology (2 Credits/3.4 ECTS)	142
Good Manufacturing Practices (2 Credits/3.4 ECTS)	145
Pharmacoeconomics (2 Credits/3.4 ECTS)	147
Pharmacotherapy III (2 Credits/3.4 ECTS)	149
Clinical Pharmacy (1 Credits/1.7 ECTS)	151
Phytotherapy (2 Credits/3.4 ECTS)	153
Technology and Formulation of Sterile Preparations (2 Credits/3.4 ECTS)	156
Laboratory Practice in Technology and Formulation of Sterile Preparations (1 Credits/1.7 ECTS)	158
Laboratory Practice in Extraction Technology of Natural Products (1 Credits/1.7 ECTS)	160
Drug Delivery System (2 Credits/3.4 ECTS)	162
Extraction Technology of Natural Products (2 Credits/3.4 ECTS)	165
Health Care System (2 Credits/3.4 ECTS)	167
Pharmaceutical Industry (6 Credits/10.2 ECTS)	169
Community Pharmacy and Regulatory (6 Credits/10.2 ECTS)	171
Cosmetics and Food (6 Credits/10.2 ECTS)	
Distribution and Marketing Management (6 Credits/10.2 ECTS)	176
Traditional Medicine (6 Credits/10.2 ECTS)	178
Research and Drug Discovery (6 Credits/10.2 ECTS)	180
Thesis (6 Credits/10,2 ECTS)	182
Students Service Learning(4 Credits/6,8 ECTS)	184
Structure Elucidation (2 Credits/3.4 ECTS)	186
Marine Pharmaceuticals (2 Credits/3.4 ECTS)	187
Drug Interactions (2 Credits/3.4 ECTS)	
Natural Corigen (2 Credits/3.4 ECTS)	190
Synthesis of Raw Materials for Medicine (2 Credits/3.4 ECTS)	192

Technology Process Industry PharmaceuticaL (2 Credits/3.4 ECTS)	194
Virus and Antiviral Drugs (2 Credits/3.4 ECTS)	196
Functional Gene Analysis (2 Credits/3.4 ECTS)	199
Analysis of Macromolecular Pharmaceutical Products (2 Credits/3.4 ECTS)	202
Halal Science Philosophy (2 Credits/3.4 ECTS)	205
Biomedical instrumentation (2 Credits/3.4 ECTS)	207
Healthy Lifestyle Management (2 Credits/3.4 ECTS)	209
Nanotherapeutics (2 Credits/3.4 ECTS)	211
Nutrigenomics and nutraceuticals (2 Credits/3.4 ECTS)	213
Molecular Modeling (2 Credits/3.4 ECTS)	216
Immunology Engineering (2 Credits/3.4 ECTS)	218
Pharmaceutical Protein Engineering (2 Credits/3.4 ECTS)	
Terapi Gen (2 Credits/3.4 ECTS)	221
Stem cell therapy (2 Credits/3.4 ECTS)	223

LIST OF COURSES

Module 1: Pharmaceutical Biochemistry

Advanced Pharmacy Practice		
Code/Status	: FAF 221103/Compulsory	
Level	: Undergraduate	
Semester	: 1	
Course	: 1. Dr. apt. Rumiyati, M.Si. (coordinator)	
Coordinator/Lecturer	2. Dr. rer.nat apt. Adam Hermawan, M.Sc.	
	3. apt. Muhammad Novrizal Abdi Sahid, S.Farm., M.Eng.,PhD.	
	4. apt. Setyowati Triastuti Utami, S. Farm., M.Sc., Ph.D.	
Language	: Indonesian, English	
Teaching Method/Duration of Classes per Week for One Semester	 SCL: learning by method of Case-based Project Will be carried out using the method: Tutorial and Discussion, where students will listen to the lectur explanation and discuss issues related to the material provided Case-based Project-based learning, where students will be give case to be solved by team of student and the results will presented in front of the lecturer and other students 	en a
Workload	100 minutes in the classroom, 100 minutes of structured activities, minutes of weekly self-directed learning.	100
Credits	2 Credits/3.4 ECTS	
Prerequisites	None	
Course Learning Outcomes (CLO)	 Students can understand comprehensively the topics regarding of Biochemistry, the function of water in human life, basic concept bioenergetic, structure and function of proteins, protein purificat technique, basic concept of enzyme kinetic, membrane structure dynamic in pharmaceutical fields. Students can understand basic concept and metabolism carbohydrate such as glycolysis, citric acid cycle, oxidat phosphorylation, gluconeogenesis, glycogen metabolism; fatty metabolism; amino acid degradation and urea cycle; biosynth membrane lipid, steroid; amino acid and hem metabolism, nucleo and integration metabolism. Students are also expected to be able explain mechanism of occurrence of some diseases related to metabolism pathways. 	pt of ation and of ative acid nesis otide le to
Description	The topic covers : an important role of Pharmaceutical Biochemistry, function of water in our life, bioenergetic, structure and function proteins, protein purification technique, membrane structure dynamic, basic concept of enzyme kinetic, basic concept and metabo of carbohydrate, glycolysis, citric acid cycle, oxidative phosphorylat	n of and olism

Pharmaceutical Biochemistry (2 Credits/3.4 ECTS)

gluconeogenesis, glycogen metabolism, fatty acid metabolism, amino acid degradation, and urea cycle, biosynthesis membrane lipid, steroid, amino acid and hem, nucleotide and integration metabolism

Examination Format/Assessment Methods	:	10% Participative, 40% Project, 25% midterm exam, 25% final exam.
Learning Media	:	LMS (elok.ugm.ac.id)
Literature	:	 Primary : 1. Berg, J.M., Tymoczko, J.L., & Stryer, L., 2012, Biochemistry, 7th Ed., W.H. Freeman and Company, New York.

		additional
		1. Journal and Review from other source such as NCBI, PubMed, Elsevier

Module 2: Cell Biology-Microbiology

Advanced Pharmacy Practice		
Code/Status	:	FAF 221105/Compulsory
Level	:	Undergraduate
Semester	:	1
Course	:	1. Dr. Sylvia UT. Pratiwi, M. Si.
Coordinator/Lecturer		2. Prof. Dr. Apt. Puji Astuti, M. Sc.
		3. Dr. apt. Indah Purwantini, M.Si.
		4. Apt. Puguh Indrasetiawan, M.Sc., Ph.D (Koordinator)
Language	:	Indonesian, English
Teaching	:	Student-Centered Learning system: collaborative learning,
Method/Duration of		self-directed learning, and cooperative learning.
Classes per Week for		150 minutes per week for 14 weeks in one semester
One Semester		150 minutes in the classroom, 150 minutes of structured activities, 150
Workload	:	minutes of weekly self-directed learning.
Credits	:	3 Credits/5.1 ECTS
Prerequisites	:	None
Course Learning	· ·	1. Students are able to analyze theoretical concepts regarding cell
Outcomes (CLO)	•	structure and function in relation to the mechanism of drug action.
04001100 (020)		2. Students are able to identify problems related to parasites and
		microbes and their treatment mechanisms.
		3. Students are able to test the quality of pharmaceutical preparations
		through microbiological methods.
		 Students are able to analyze drugs used for infection therapy
Decerintian	:	The Cell Biology-Microbiology course explores into the theoretical
Description	•	concepts and practical applications of cell biology and microbiology. It
		covers the structure and function of both prokaryotic and eukaryotic cells,
		cell growth and differentiation, and the mechanisms of cell division and
		the cell cycle. The course also addresses microbial ecology, growth, and
		pathogenicity, along with pharmaceutical microbiology techniques such as
		microscopy and bioassays for microbial testing. Students will develop skills
		in microbiological quality control of pharmaceutical preparations, including sterility tests and validation. Additionally, the course examines
		the mechanisms of action of antibiotics, antimicrobial resistance, and
		therapeutic uses of antimicrobials, with a focus on the relationship between cell structure and drug function. The course combines classroom
		between cell structure and drug function. The course combines classroom
		lectures with practical sessions to enhance students' understanding and
		application of these concepts in real-world scenarios.

Cell Biology-Microbiology (3 Credits/5.1 ECTS)

Examination Format/Assessment Methods	: 40% Project, 25% midterm exam, 35% final exam.

Module 3: Pharmaceutics 1

Pharmaceutics 1 (2 Credits/3.4 ECTS)

Advanced Pharmacy Practice		
Code/Status	:	FAF 221107/Compulsory
Level	:	Undergraduate
Semester	:	1
Course	:	1. Dr. Chairun Wiedyaningsih, M.Kes., M. App.Sc., Apt.
Coordinator/Lecturer		2. Niken Nur Widyakusuma, M.Sc., Apt.
		3. Prof. Dr. Susi Ari Kristina, M.Kes., Apt.
		4. Fathul Muin, M.Pharm., Apt
Language	:	Indonesian, English
Teaching	:	Case based learning
Method/Duration of Classes per Week for One Semester		100 minutes per week for 14 weeks in one semester
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning.
Credits	:	2 Credits/3.4 ECTS
Prerequisites	:	None
Course Learning Outcomes (CLO)	:	 Students get to know the history of pharmaceutical science, pharmacists, drugs and their classification, and the Indonesian Pharmacopoeia Students are familiar with various forms of pharmaceutical dosage forms and how to use them Students are able to understand recipes and copies of recipes
Description	:	Pharmaceutics 1 contains the main topics of the history of pharmacy and pharmacists, drugs and drug classification, introduction to the Indonesian Pharmacopoeia, introduction to dosage forms and how to use them: pulvis, pulveres, capsules, tablets, pills, pastes, creams, gels, suppositories, ointments, enemas, solutions, suspensions, emulsions, tinctures, extracts, infusions, eye drops, injections, vaccines, immunoserums, special preparations, medical devices, and disposable medical materials, and introduction to prescriptions and prescription copies and the use of Latin in prescriptions and prescription copies.
Examination Format/Assessment Methods	:	20% Assignment, 40% midterm exam, 40% final exam.
Learning Media	:	LMS (elok.ugm.ac.id)
Literature	:	1. Anonim, 1995, Farmakope Indonesia, Edisi IV, Departemen Kesehatan RI, Jakarta.

- 2. Ansel, H. C., Popovich, N.G., Allen, L.V., 2005, Pharmaceutical Dosage Forms and Drug Delivery Systems, 8 th Ed., Williams & amp; Wilkins, Philadelphia.

- 6. Aulton, M.E., and Taylor K.M.G., 2013, Aulton's Pharmaceutics: The design and manufacture of medicines, 4th Ed, Elsevier, Edinburgh.

Module 4: Physical Pharmacy I

Physical Pharmacy I (2 Credits/3.4 ECTS)

Advanced Pharmacy Practice		
Code/Status	:	FAF 221108/Compulsory
Level	:	Undergraduate
Semester	:	1
Course Coordinator/Lecturer	:	 Dr. Abdul Karim Zulkarnain, M.Si., Apt. (coordinator) Prof. Dr. Akhmad Kharis Nugroho, M.Si., Apt. Dr. Adhyatmika, M.Biotech., Apt.
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	100 minutes per week for 14 weeks in one semester
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning.
Credits	:	2 Credits/3.4 ECTS
Prerequisites	:	None
Course Learning Outcomes (CLO)	:	 Students are able to understand phase rules and the causes of phase changes, the relationship between thermodynamics and pharmacy. Students are able to explain the physical properties of drug molecules. Students are able to explain the concepts of solutions, buffers, tonicity and predict the solubility of drug compounds. Students are able to understand the basic principles of determining the stability/expiry time of drugs. Students are able to apply the principles of dissolution in the formulation of medicinal preparations, both as a basis for preparation, design and quality control.
Description	:	This course discusses the subject of phase problems and phase rules, the relationship between thermodynamics and pharmaceuticals, physical properties of drug molecules, reaction kinetics, solution and solubility concepts, ionic comparisons (review), composition of buffers and buffer solutions, tonicity at isotonic pH.
Examination Format/Assessment Methods	:	20% Assignment, 5% discussion, 5% SCL, 10% quiz, 30% midterm exam, 30% final exam.
Learning Media	:	
Literature	:	1. Allen, T., 2003, Powder Sampling and Particle Size Determination, Elsevier, Amsterdam.

- 2. Aulton, M.E. (Ed.), 2004, Pharmaceutics: The Science of Dosage Form Design, 2nd Ed., ELBS, Hongkong.
- 3. Banher, G.S., Rhodes, C.T., 2002, Modern Pharmaceutics, 4th Ed., Marcel Dekker, New York.
- 4. Florence, A.T. & Attwood D., 2006, Physiochemical Principles of Pharmacy, 4th Ed., Pharmaceutical Press, London.
- 5. Kim, C.J., 2004, Advanced Pharmaceutics, Physicochemical Principles, CRS Press, New York.
- Sinko, P.J., 2011, Martin's Physical Pharmacy and Pharmaceutical Sciences, 6th Ed., Lippincott Williams & Wilkins, A Wolters Kluwer Co., Philadelphia.

Advanced Pharmacy Practice		
Code/Status	:	FAF 221109/Compulsory
Level	:	Undergraduate
Semester	:	1
Course	:	1. Prof. Dr. Ritmaleni, S.Si. (Coordinator)
Coordinator/Lecturer		2. Dr. Apt. Tatang Irianti, M.Sc.
		3. Dr. Apt. Navista Sri Octa Ujiantari, S.Farm., M.Sc.
		4. Apt. Halida Rahmania, S. Farm., M.Agr.Sc., Ph. D.
Language	:	Indonesian, English
Teaching	:	Tutorial and discussion
Method/Duration of		100 minutes per week for 14 weeks in one semester
Classes per Week for		
One Semester		
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100
Cradita		minutes of weekly self-directed learning. 2 Credits/3.4 ECTS
Credits	•	· · · · · · · · · · · · · · · · · · ·
Prerequisites	:	None
Course Learning Outcomes (CLO)	:	 Apply the stoichiometry concept of acid-base, redox and functional group and liquid-liquid extraction in analytical chemistry apply the basic qualitative and quantitative analytical chemistry
		concepts by applying to the simple instrumentsapply the basic concept of thermodynamics
		4. apply the basic concept of organic chemistry and its application in
		pharmaceutical sciences
Description	:	Basic Pharmaceutical Chemistry Course will be the basic of other courses
·		that involved in
		Pharmaceutical Sciences. This course consists of organic molecule
		formation, chemical bonding, kinetics, thermochemistry, anion, cation and
		functional group qualitative analysis, acid-base, gravimetry, thermal
		analytical method and basic electrochemistry.
Examination	:	20% Assignment, 40% midterm exam, 40% final exam.
Format/Assessment Methods		
Learning Media	:	LMS (elok.ugm.ac.id)
Literature	:	1. Fesenden & Fessenden, Organic Chemistry

- 8. Masterton, W.L. and Hurley, C.N., 2009, Chemistry: Principle and Reaction, Sixth Edition, Brooks/Cole Cengage Learning, California

Module 6: Organic Chemistry I

Organic Chemistry I (2 Credits/3.4 ECTS)

Advanced Pharmacy Practice		
Code/Status	:	FAF 221111/Compulsory
Level	:	Undergraduate
Semester	:	1
Course	:	1. Prof. Dr. Ritmaleni, S.Si. (Coordinator)
Coordinator/Lecturer		2. Dr. Hilda Ismail, M.Si., Apt.
		3. Dr. Artania Adnin Tri Suma, S.Si.
		4. Dr. Sci. apt. Rohmad Yudi Utomo, M.Sc.
Language	:	Indonesian, English
Teaching	:	Tutorial and discussion
Method/Duration of		100 minutes per week for 14 weeks in one semester
Classes per Week for		
One Semester		100 minutes in the element 100 minutes of structured estivities 100
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning.
Credits		2 Credits/3.4 ECTS
Prerequisites	•	None
Course Learning	:	1. understand the basic concept of structure, chemical bonding
Outcomes (CLO)	•	functional group, alkane, and cycloalkane
		2. understand the basic concept of stereochemistry, alkene, alkyne, and
		alkyl halide
		3. understand the basic concept of aromaticity, electrophilic and
		nucleophilic substitution reactions on aromatic compound
		4. understand the basic concept of alcohol, ether, epoxide, phenol, amine, and retrosynthetic analysis on alcohol
Description	:	Organic Chemistry I Course will be the base of other courses that need
Description	•	the understanding of structure and its function in relation with
		Pharmaceutical Sciences. This course consists of structure, chemical
		bonding functional group, alkane, cycloalkane, stereochemistry, alkene,
		alkyne, alkyl halide, aromaticity, electrophilic and nucleophilic
		substitution reactions on aromatic compound, ether, epoxide, phenol,
		thiol, sulphide, amine, and retrosynthetic analysis on alcohol
Examination		20% Assignment, 40% midterm exam, 40% final exam.
Format/Assessment	•	
Methods

Literature	:	1. Mc.Murry, J. 2012, Organic Chemistry
		 Clayden et al., 2012, Organic Chemistry

Module 7: Pharmaceutical Biochemistry Practical Work

Advanced Pharmacy Practice		
Code/Status	:	FAF 221104/Compulsory
Level	:	Undergraduate
Semester	:	1
Course Coordinator/Lecturer	:	 Dr. apt. Rumiyati, M. Si. (coordinator) apt. Setyowati Triastuti Utami, M. Sc., Ph.D Prof. Dr. apt. Edy Meiyanto, M. Si. Dr. apt. Riris Istighfari Jenie, M.S i. Dr.rer.nat. apt. Adam Hermawan, M.Sc. Dr. apt. Muthi' Ikawati, M. Sc. Dr. apt. Muthi' Ikawati, M. Sc. Dr. Cyntia Nurul Apsari, M. Si. Dr. Raisatun Nisa
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	Team-based Project 170 minutes per week for 14 weeks in one semester
Workload	:	170 minutes laboratory practice
Credits	:	1 Credits/1.7 ECTS
Prerequisites	:	None
Course Learning Outcomes (CLO)	:	 Students are able to understand the basic principles and use various equipment necessary for practical work (group work/practical sessions) Students are able to measure enzyme activity and kinetic parameters such as Km and Vmax (group work/practical sessions) Students are able to perform protein analysis, including protein separation and molecular weight determination using the SDS PAGE method (group work/practical sessions) Students are able to measure the products of macromolecule metabolism, such as carbohydrates, and determine glycogen levels (group work/practical sessions) Students are able to perform protein structure analysis (group work/practical sessions)
Description	:	This practical course covers the basic principles of the equipment used in the laboratory, analysis of enzyme activity and kinetic parameters such as Km and Vmax, protein separation and determination of protein molecular weight using the SDS PAGE method, measurement of glycogen levels resulting from carbohydrate metabolism, and protein structure analysis.

Pharmaceutical Biochemistry Practical Work (1 Credits/1.7 ECTS)

Examination Format/Assessment Methods	:	25% Participatory activity, 40% Project, 35% final exam
Learning Media	:	LMS (elok.ugm.ac.id)
Literature	:	 Lehninger, A.L., 2003, Principles of Biochemistry, Worth publishers Inc., New York. Elliot, W.H. and Elliot, D.C., 1996, Biochemistry and Molecular Biology, John wiley & Sons, New York. Module 8: Cell Biology-Microbiology Practical Work

Advanced Pharmacy Pra	acti	ce
Code/Status	:	FAF 221106/Compulsory
Level	:	Undergraduate
Semester	:	1
Course	:	1. Dr. Apt. Indah Purwantini, M. Si. (Koordinator)
Coordinator/Lecturer		2. Prof. Dr. Apt. Puji Astuti, M. Sc.
		3. Dr. Djoko Santosa, M. Si.
		4. Dr. Sylvia T Pratiwi, M. Si.
		5. Dr. Apt. Purwanto, M.Si
		6. Apt. Puguh Indrasetiawan, M.Sc., PhD
		7. Apt. Setyowati Triastuti Utami, M.Sc., PhD
Language	:	Indonesian, English
Teaching	:	Learning is carried out using the SCL system, students carry out
Method/Duration of		independent practice
Classes per Week for		170 minutes per week for 14 weeks in one semester
One Semester Workload		170 minutes laboratory practice
	:	3 Credits/5.1 ECTS
Credits	:	
Prerequisites	:	None1. Students are able to analyze theoretical concepts about cell structure
Course Learning Outcomes (CLO)	:	and function in relation to the mechanism of action of drugs
Outcomes (CEO)		 Students are able to test the quality of pharmaceutical preparations
		microbiologically
		3. Students are able to analyze drugs used for infection therapy
Description	:	Cell Biology Practicum - Microbiology is given in the form of learning
Description	•	through practicum (1 credit). Overall, Cell Biology - Microbiology
		discusses the scope and benefits of studying pharmaceutical microbiology
		and cell biology and parasitology in the field of pharmacy in particular
		and health in general, which includes the basic concepts of cell biology for
		prokaryotic and eukaryotic organisms, the process of cell division and its
		application in the discovery of antimicrobial drugs and the occurrence of
		disease. , common tests and assays required in pharmaceutical
		microbiology.
Examination	:	30% Pretest, 40% Project report, 30% final exam.
Format/Assessment		
Methods		
Learning Media	:	LMS (elok.ugm.ac.id)

Module 9: Basic Pharmaceutical Chemistry Practical Work

Advanced Pharmacy Practice			
Code/Status	:	FAF 221110/Compulsory	
Level	:	Undergraduate	
Semester	:	1	
Course	:	1. apt. Navista Sri Octa Ujiantari, S.Farm., M.Sc., Ph.D. (coordinator)	
Coordinator/Lecturer		2. Prof. Dr. Ritmaleni, S.Si.	
		3. Dr.rer.nat. apt. Tatang Irianti, M.Sc.	
		4. apt. Eka Noviana, S.Farm., M.Sc., Ph.D.	
		5. apt. Halida Rahmania, S.Farm., M.Agr.Sc., Ph.D.	
Language	:	Indonesian, English	
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be conducted using several methods: 1. Tutorial: Students will listen to the instructor's explanations during each session (approximately 30 minutes). 2. Case-Based Learning: Students will be assigned tasks to solve problems according to the objectives of each practical topic. 3. Discussion: Students will pose questions or answer questions related to issues according to the objectives of each practical topic. 170 minutes per week for 14 weeks in one semester 	

Basic Pharmaceutical Chemistry Practical Work (1 Credits/1.7 ECTS)

Workload	:	170 minutes laboratory work			
Credits		1 Credits/1.7 ECTS			
Prerequisites	:	None			
Course Learning Outcomes (CLO)	:	 Students will be able to apply safety practices in the laboratory and use laboratory equipment. Students will be able to apply the concepts of acid-base titration. Students will be able to apply the concepts of chemical kinetics. Students will be able to apply the concepts of extraction. Students will be able to apply the concepts of qualitative analysis of cation. Students will be able to apply the concepts of qualitative analysis of anion. 			
Description	:	The course "Basic Pharmaceutical Chemistry Laboratory" is offered as a practical learning experience (1 credit) covering fundamental practices in Pharmaceutical Chemistry. This course serves as a support for subjects related to the application of chemistry in the pharmaceutical field. It includes safety practices in the laboratory, introduction and the use of laboratory equipments, acid-base titration, chemical kinetics, extraction, qualitative cation analysis, and qualitative anion analysis.			

Examination Format/Assessment Methods	:	10% Participatory Activities, 60% Project, 30% final exam.
Learning Media	:	LMS (elok.ugm.ac.id)

Module 88: Human Physiology Anatomy

Human Physiology Anatomy (2 Credits/3.4 ECTS)

Advanced Pharmacy Pra	ctice
Code/Status	: FAF 221101/Compulsory
Level	: Undergraduate
Semester	: 1
Course	: 1. Dr. dr. Dicky Moch. Rizal, M.Kes., Sp.And.
Coordinator/Lecturer	2. dr. Ginus Partadiredja, M.Sc., Ph.D.
Language	: Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	: 100 minutes per week for 14 weeks in one semester
Workload	: 100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning.
Credits	2 Credits/3.4 ECTS
Prerequisites	: None
Course Learning Outcomes (CLO)	 Able to understand organ anatomy and physiology of the central and peripheral nervous system, urinary (kidneys and body fluids), senses cardiovascular, as well as metabolism and thermoregulation Able to understand organ anatomy and physiology of the endocrine and reproductive systems, gastrointestinal, blood and immunity respiration, exercise physiology, and musculoskeletal
Description	: This course provides students with lecture material on the topics or anatomy and physiology of various organ systems which are important fo health students to study, especially pharmacy. The material studied consists of organ anatomy and physiology of the central and peripheral nervous systems, urinary (kidneys and body fluids), senses cardiovascular, as well as metabolism and thermoregulation, endocrine and reproduction, gastrointestinal, blood and immunity, respiration exercise physiology, and musculoskeletal.
Examination Format/Assessment Methods	: 35% midterm exam, 35% final exam, 10% project report, 20% practica work final exam.
Learning Media	:
Literature	 Arthur, C. &Guyton, M.D., 2007, Textbook of Medical Physiology 11th Ed., WB Saunders Co., Philadelphia, London, Toronto. human physiology anatomy Practical Work (1 Credits/1.7 ECTS)

 Scanlon, V.C. & Sanders, T., 2007, Essentials of Anatomy and Physiology, 5th Ed., F.A. Davis Company, Philadephia.

Molecular Biology (2 Credits/3.4 ECTS)

Advanced Pharmacy Practice			
Code/Status	:	FAF 221201/Compulsory	
Level	:	Undergraduate	
Semester	:	2	
Course Coordinator/Lecturer	:	Dr. Riris Istighfari Jenie, M.Si., Apt (Coordinator) Dr. Rumiyati, M.Si., Apt. Dr. Muthi' Ikawati, M.Sc., Apt. Dr. Puguh Indrasetiawan, M.Sc., Apt.	
Language	:	Indonesian, English	
Teaching Method/Duration of Classes per Week for One Semester	:	SCL: Team-based Project. 100 minutes per week for 14 weeks in one semester	
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning.	
Credits	:	2 Credits/3.4 ECTS	
Prerequisites	:	Pharmaceutical Biochemistry FAF 221103 Cell Biology-Microbiology FAF 221105	
Course Learning Outcomes (CLO)	:	 Students can explain the nature of genetic material (DNA, RNA), estimate mutations, and repair mutations in biological systems. Students can understand the application of characteristics of genetic material (DNA, RNA) in explaining genetic diversity (polymorphism), DNA analysis, and the mechanisms of viral infection and genetic transformation. Students can compare the regulation of gene expression (transcription and translation) in prokaryot and eukaryot biological systems. Students can use the molecular biology knowledge gained to explain the pathophysiology of cancer disease (carcinogenesis) at the molecular level. 	
Description	:	The Molecular Biology course consists of 2 credits of lectures. The Molecular Biology Lecture contains subjects regarding prokaryotes and eukaryotic cells, organelles and energy generation functions in cells, cytoskeletons, structures, and properties of nucleic acids. It is also explained molecularly: the central dogma of expression of a gene, the structure of genes and genomes, polymorphism, explained about the process by which mutations occur and their repair, how a gene is replicated, expressed into RNA, and then into proteins; how is the regulation of gene expression in both prokaryotes and eukaryotes; how	

		ercellular communication (signal transduction) runs and the types of nsduction signals, about the process of cell division and its regulation,
		a little about carcinogenesis.
Examination Format/Assessment Methods	: 15% exa	6 Participatory Activities, 35% Project, 25% midterm exam, 25% final m.

Module 11: Pharmacology I

Pharmacology I (2 Credits/3.4 ECTS)

Advanced Pharmacy Pi	ractice	
Code/Status	: FA	F 221203/Compulsory
Level	: Un	ndergraduate
Semester	: 2	
Course	: 1.	Prof. apt. Agung Endro Nugroho, M.Si., PhD.
Coordinator/Lecturer	2.	apt. Nunung Yuniarti, M.Si., PhD.
	3.	apt. Dyaningtyas Dewi Pamungkas Putri, M.Sc., PhD
	4.	apt. Arief Nurrochmad, M.Si., M.Sc., PhD
Language	: Inc	donesian, English
Teaching	: 10	0 minutes per week for 14 weeks in one semester
Method/Duration of Classes per Week for One Semester		
Workload	-	0 minutes in the classroom, 100 minutes of structured activities, 100 nutes of weekly self-directed learning.
Credits	: 20	Credits/3.4 ECTS
Prerequisites	: Ph	armaceutical Biochemistry (FAF 221103)
	Hu	ıman Physiology anatomy (FAF 221101)
Course Learning Outcomes (CLO)	3.	Students can explain the development and principles of testing in experimental pharmacology, including in vitro, ex vivo, and in vivo; theoretical concept of drug activity in the body and its molecular mechanisms; Pharmacokinetic principles include drug absorption and its mechanisms, distribution, metabolism and molecular mechanisms and drug excretion Students can explain the basic principles of metabolism, types of metabolic reactions in excretory organs, influencing factors, genetic factors: pharmacogenetics; Excretion Students are able to explain the actions and effects of drugs; Drug interactions with receptors; Relationship between dose and response; factors that influence patient response using pharmacokinetic and pharmacodynamic principles Students are able to explain the mechanism of action of drugs on the autonomic nervous system
		Students are able to explain the mechanism of action of drugs on the central nervous system Students are able to explain the mechanism of drug action on the cardiovascular system

Description	: Pharmacology 1 studies the fate of drugs and drug activity in the body along with their molecular mechanisms (pharmacokinetics and pharmacodynamics). This course is preceded by an understanding of the definition of pharmacology, its history and development, the scope studied and the role of pharmacology in drug discovery and development Apart from that, it also discusses experimental pharmacology, in silico, in situ, in vitro, ex vivo and in vivo, qualitative pharmacokinetics including drug absorption and its mechanisms, distribution, metabolism and drug excretion. Pharmacology 1 also studies the targets of drug action as wel as the principles of drug action and their molecular mechanisms of specific action targets (enzymes, receptors, transporters, ion channels) discussing drug and receptor interactions with a kinetic focus and dose-effect relationships. At the organ level, Pharmacology 1 studies drug that work on the autonomic nervous system, central nervous system, and cardiovascular drugs along with their molecular mechanisms of action.
Examination Format/Assessment Methods	: 45% midterm exam, 45% final exam, 10% quiz
Learning Media	: LMS (elok.ugm.ac.id)

Module 12: Pharmaceutics I

Pharmaceutics II (1 Credits/1.7 ECTS)

Advanced Pharmacy Practice				
Code/Status	FAF 221204/Compulsory			
Level	Undergraduate			
Semester	2			
Course Coordinator/Lecturer	 Dr. apt. Chairun Wiedyaningsih, M.Kes., M.App.Sc. (Coordinator) apt. Niken Nur Widyakusuma, M.Sc. apt. Fathul Muin, M.Pharm. Prof. Dr. apt. Susi Ari Kristina, M.Kes. 			
Language	Indonesian, English			
Teaching Method/Duration of Classes per Week for One Semester	 Learning will be conducted using several methods: Tutorial, where students will listen to the lecturer's explanation Discussion, where students will ask questions or answer question about a problem Team-based Project, where students will be divided into group four/five, then given a task to be completed together (interviewing real practicing pharmacist about experience in handlin incompatibilities). The task will be made in the form of a short report and be discussed together. All students from different class matcacess all the reports. 	of g a ing ort		
Workload	50 minutes in the classroom, 50 minutes of structured activities, 5 minutes of weekly self-directed learning.	50		
Credits	1 Credits/1.7 ECTS			
Prerequisites	Pharmaceutics I (FAF 221107)			
Course Learning Outcomes (CLO)	 Students can explain the general provisions and requirements f dispensing medicines: facilities, infrastructure, personnel, ar compounding guidelines as well as examples of their application standard formulas Students can explain preparation methods for compoundin pharmaceutical preparations, drug storage, expiry date, and beyor use date Students can solve calculation problems in compoundin pharmaceutical preparations and calculating doses Students can explain cases of incompatibility in pharmaceutic preparations 	nd in ng nd ng		
Description	Pharmaceutics II course discusses about aspects of drug compounding of a small scale (community pharmacy) so that it can become the basis for development on a large scale (industry). The contents of the development on a large scale (industry).	for		

	Pha	armaceutics II includes general provisions and requirements for
	dis	pensing medicines: facilities, infrastructure, personnel, Standard
	Op	erational Procedures (including weighing), calculating
	for	mulas/calculations in compounding medicines, labels, changing dosage
	for	ms, introduction to various kinds of standard prescriptions - internal
	use	and external use medicines, preparation methods for solid, semisolid
	and	l liquids, incompatibility in drug compounding, drug storage, expiry
	dat	e and beyond use date.
Examination	: 50%	% midterm exam, 50% final exam
Format/Assessment

Physical Pharmacy II (1 Credits/1.7 ECTS)

Advanced Pharmacy Practice			
Code/Status	: FAF 221206/Compulsory		
Level	: Undergraduate		
Semester	: 2		
Course Coordinator/Lecturer	 Apt Marlyn Dian Laksitorini MSc., PhD (coordinator) Apt Adhyatmika M. Biotech., PhD Dr. Apt. Sekar Ayu Pawestri M.Sc. Dr. Nindya Kusumorini, M.Sc. 		
Language	: Indonesian, English		
Teaching Method/Duration of Classes per Week for One Semester	50 minutes per week for 14 weeks in one semester		
Workload	50 minutes in the classroom, 50 minutes of structured activities, 50 minutes of weekly self-directed learning.		
Credits	· 1 Credits/1.7 ECTS		
Prerequisites	Physical Pharmacy I (FAF 221108)		
Course Learning Outcomes (CLO)	 Students are able to understand and apply the principle of facial tension in the pre-/formulation of drug preparations, as well as drug adsorption at the interface to produce therapeutic effects. Students are able to understand the formulation process of medicinal preparations based on the properties of colloidal dispersions, suspensions and emulsions. Students are able to understand and identify the influence of flow properties and particle properties for the basis of pre-/formulation of medicinal preparations, the influence of hygroscopicity on the stability of the preparation. Students are able to apply the principles of diffusion in preparing drug formulations. Students are able to experimentally test the solubility, partition coefficient, particle size, flow properties, colloidal dispersion of drug compounds and their applications in pharmacy. 		
Description	: The Physical Pharmacy II course consists of learning through lectures (1 credit) and practicum (1 credit). Overall, the Physical Pharmacy II course contains material on the subject matter.		
Examination Format/Assessment Methods	: 10% Discussion, 5% quiz, 5% assignment, 25% project, 5% Practical work final exam, 25% midterm exam, 25% final exam

Module 14: Social and Behavioral Sciences of Pharmacy

Advanced Pharmacy Pra	acti	ce
Code/Status	:	FAF 221208/Compulsory
Level	:	Undergraduate
Semester	:	2
Course	:	1. Prof. Dr. Susi Ari Kristina, M.Kes, Apt (coordinator)
Coordinator/Lecturer		2. Anna Wahyuni Widayanti, MPH., Apt., Ph.D.
		3. Niken Nur Widyakusuma,M.Sc.,Apt
		4. Rizka Prita Yuliani, M.Pharm.,Sci., Apt
Language	:	Indonesian, English
Teaching	:	SCL: Team-based Project
Method/Duration of		100 minutes per week for 14 weeks in one semester
Classes per Week for		
One Semester		
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning.
Credits	:	2 Credits/3.4 ECTS
Prerequisites	:	none
Course Learning Outcomes (CLO)	:	 Students are able to explain the concepts and definitions of health behavior, behavior theory and behavior change and their application in pharmaceutical services Students are able to apply the concepts of health and illness, social determinants of health and health seeking behavior to explain the results of observations in community settings Students are able to examine situations related to social phenomena such as social stigma, medical pluralism, and non-adherence to medication Students are able to understand the principles of effective
		communication and explain their application in interprofessional partnerships.
Description	:	Overall, the Social and Behavioral Sciences of Pharmacy discusses the subject matter including concepts, methods and theories of sociology and psychology as well as their application in pharmaceutical services. The application of social and behavioral science theory and methodology is realized in pharmaceutical practice in order to provide pharmaceutical services to patients with a biopsychosocial approach, health promotion, and appropriate health seeking behavior through effective communication. Up to date case studies are provided to support

Social and Behavioral Sciences of Pharmacy (2 Credits/3.4 ECTS)

		services.

professional attitudes and provide holistic and optimal pharmaceutical

Analytical Chemistry I (1 Credits/1.7 ECTS)

Advanced Pharmacy Pra	actice
Code/Status	: FAF 221209/Compulsory
Level	: Undergraduate
Semester	: 2
Course Coordinator/Lecturer	 Dr.rer.nat. Tatang Irianti Prof. Dr. Abdul Rahman Dr. Halida Rahmania
Language	: Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	 SCL: Team-based Project/Case-based Learning/PBL 50 minutes per week for 14 weeks in one semester
Workload	: 50 minutes in the classroom, 50 minutes of structured activities, 50 minutes of weekly self-directed learning.
Credits	: 1 Credits/1.7 ECTS
Prerequisites	: Basic Pharmaceutical Chemistry (FAF 221109)
Course Learning Outcomes (CLO)	 Able to discuss the appropriate volumetric method for the analysis of drugs or drug substances based on the structure of drug compounds Able to correctly demonstrate the process of volumetric analysis of drugs or drug ingredients Able to process data and evaluate the results of drug analysis or drug ingredients and state whether a drug or drug substance meets the requirements
Description	: The Analytical Chemistry course 1 discusses the basic problems of volumetric quantitative analysis of drug compounds which include: acidi-alkalimetry, water-free titration, reduction-oxidimetry (iodo-iodimetry, permanganometry, serimetry, bromo-bromatometry, nitrimetry), complexometry, precipatometry (argentometry), and electrometry (potentiometry, voltammetry, coulometry).
Examination Format/Assessment Methods	: 20% task, 40% midterm exam, 40% final exam
Learning Media	: LMS (elok.ugm.ac.id)
Literature	 The Main: 1. Kar, A, 2005, Pharmaceutical Drug Analysis, Age Int. Limited Publisher, New Delhi 2. Vogel's, 1989, Texxbook of quantitative analysis, 5th Ed, Longmans, Green and Co, London, New York, Toronto

- 5. Anonim, 2018, United States Pharmacopoeia, New York, USA

Module 16: Organic Chemistry II

Organic Chemistry II (2 Credits/3.4 ECTS)

Advanced Pharmacy Pra	ice
Code/Status	FAF 221211/Compulsory
Level	Undergraduate
Semester	2
Course	1. Prof. Dr. Ritmaleni, S.Si. (Coordinator)
Coordinator/Lecturer	2. Dr. Hilda Ismail, M.Si., Apt.
	3. Dr. Artania Adnin Tri Suma, S.Si.
	4. Dr. Sci. apt. Rohmad Yudi Utomo, M.Sc.
Language	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	Tutorial and discussion 100 minutes per week for 14 weeks in one semester
Workload	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning.
Credits	2 Credits/3.4 ECTS
Prerequisites	Organic Chemistry I (FAF221111)
Course Learning Outcomes (CLO)	 understand the basic concept of Nuclephilic Addition Reaction on aldehyde and keton understand the basic concept of Nuclephilic Substitution Reaction on Catboxylic acid and its derivatives understand the basic concept of Alpha Substitution and condensation Reaction on carbonyl compounds understand the basic concept of carbohydrate, nucleic acid, lipid, amino acid and protein in Organic Chemistry
Description	Organic Chemistry Course II will be emphasised on the understanding of the reaction mechanisms of carbonyl compounds with different nucleophiles, its application to carbohydrate, nucleic acid, lipid, amino acid and protein molecules and also to the basic concept of drug synthesis.
Examination Format/Assessment Methods	20% Assignment, 40% midterm exam, 40% final exam.
Learning Media	LMS (elok.ugm.ac.id)
Literature	Primary : 1. Mc.Murry, J. 2012, Organic Chemistry 2. Clayden et al., 2012, Organic Chemistry

Module 17: Pharmacy Management

Advanced Pharmacy Pra	acti	ce
Code/Status	:	FAF 221213/Compulsory
Level	:	Undergraduate
Semester	:	2
Course	:	1. Dr. apt. Dwi Endarti, M.Sc (Koordinator)
Coordinator/Lecturer		2. Prof. Dr. apt. Satibi, M.Si
		3. Prof. Dr. apt. Susi Ari Kristina, M. Kes
		4. Apt. Fathul Muin, M.Pharm.
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	SCL: Project (Team-based Project)/Case based learning 100 minutes per week for 14 weeks in one semester
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning.
Credits	:	2 Credits/3.4 ECTS
Prerequisites	:	Social Science and Behavioral of Pharmacy (FAF221208) \rightarrow co req
Course Learning Outcomes (CLO)	:	 Understand concepts and be able to solve pharmaceutical service problems by implementing drug management which includes the stages of selection, planning, procurement, storage, distribution and use. Understand concepts and be able to solve pharmaceutical service problems by implementing management support which includes strategic management, financial management, HR management, marketing management, and management information systems.
Description	:	Pharmacy management courses discuss the basics and applications of organizational management, human resource management, operations management, financial management, marketing management, and strategic management in the pharmaceutical field.
Examination Format/Assessment Methods	:	10% Participatory activities, 40% project, 25% midterm exam, 25% final exam.
Learning Media	:	LMS (elok.ugm.ac.id)
Literature	:	 Primary : 3. Dessele, P., Shane, Z., David, P., 2005, Pharmacy Management Assentials for All Practice Setting, The McGraww-Hill Compony, USA. 4. Herist, K.N., Rollins, B., dan Perri, M., 2011, Financial Analysis in Pharmacy Practice, Pharmaceutical Press, India.

Pharmacy Management (2 Credits/3.4 ECTS)

Module 18: Molecular Biology Practical Work

Code/Status	:	FAF 221202/Compulsory
Level	:	Undergraduate
Semester	:	2
Course Coordinator/Lecturer	:	 Dr. rer . nat . apt . Adam Hermawan, S.Farm ., M.Sc. (Coordinator) Dr. apt . Muthi' Ikawati, M.Sc. Prof. Dr. apt . Edy Meiyanto , M.Sc. apt . Rumiyati, S.Si., M.Sc., Ph.D. apt . Setyowati Triastuti Utami, S.Farm ., M.Sc., Ph.D. Dr. Riris Istighfari Jenie , M.Si., Apt . M Novrizal Abdi Sahid, S. Farm ., M. Eng ., Ph. D., Apt . Dr. err . nat . apt . Siti Nurul Hidayah, S.Farm ., M.Sc. Puguh Indrasetiawan , S.Farm ., M.Sc., Ph.D., Apt . Dr. apt . Puji Astuti, S.Si., M.Sc. Purwanto, M.Sc., Ph.D., Apt . Dr. apt . Silvia Utami Tunjung Pratiwi, S.Si., M.Sc.
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be carried out using several methods: 1. Flipped learning , students study material individually which is uploaded on eLOK . 2. Lecturer tutorials 3. Case-based learning/PBL/SCL Method and Practicum Practical work : Students are designed to gain technical skills in the lab, discuss, work in groups and independently to solve specific problems/cases, analyze and interpret data, and write reports 170 minutes per week for 14 weeks in one semester
Workload	:	170 minutes laboratory practice
Credits	:	1 Credits/1.7 ECTS
Prerequisites	:	Pharmaceutical Biochemistry (FAF 221103) Cell Biology-Microbiology (FAF 221105)
Course Learning Outcomes (CLO)	:	 Students can explain the properties of genetic material, predict mutations, and repair mutations (repair) in biological systems. Students can predict genetic diversity (polymorphism) and genetic transformation and use this knowledge to explain differences in individual responses to drugs.

Molecular Biology Practical Work (1 Credits/1.7 ECTS)

	 Student can compare regulation gene expression (transcription and translation) in prokaryotic and eukaryotic biological systems Student can use acquired knowledge of molecular biology For explain pathophysiology disease cancer (carcinogenesis) at the molecular level
Description	: Molecular Biology Practicum are devided into 2 topics : wet work laboratory and dry lab. Work laboratory Includes : Introduction culture cell and cytotoxicity test, DNA isolation and analysis DNA purity, Identification polymorphism a gene uses the polymerase chain Reaction (PCR)- Restriction Fragment Length Polymorphism (RFLP), analysis PCR products with agarose gel electrophoresis; practicum dry lab includes : introduction bioinformatics based NCBI BLAST and identification of gene expression with GEO and DAVID.
Examination Format/Assessment Methods	: 15% Pretest, 10% performance, 50% response, 25% report.
Learning Media	: LMS (elok.ugm.ac.id)

		9. apt. Rizka Prita Yuliani, M.Pharm.
		10. apt. Fathul Muin, M.Pharm
Language	:	Indonesian, English
Teaching	:	Learning will be conducted using individual practice in the laboratory
Method/Duration of		170 minutes per week for 14 weeks in one semester
Classes per Week for		
One Semester		170 minutes laboratory practice
Workload	:	170 minutes laboratory practice
Credits	:	1 Credits/1.7 ECTS
Prerequisites	:	Pharmaceutics I (FAF 221107)
Course Learning Outcomes (CLO)	:	Students can compound pharmaceutical preparations
Description	:	The contents of Practicum of Pharmaceutics II consists of compounding
		solid, semi-solid and liquid pharmaceutical preparations (pulvis, pulveres,
		capsulae, pillulae, cremores, unguentum, pastee, suppositories, solutio,
		mixtura, infusa and saturationes)
Examination	:	50% Participatory Activities*, 50% Final exam.
Format/Assessment

Teaching Method/Duration of Classes per Week for One Semester	:	 The learning will be carried out using several methods: Flipped learning, where students study independently Tutorial, where students listen to the lecturer's explanation Discussion, where students ask questions or answer Team-based projects, where students are divided into groups, then given group assignments to complete together and the completion of the tasks will be made in the form of presentations and short reports

Organic Chemistry Practical Work II (1 Credits/1.7 ECTS)

170 minutes per week for 14 weeks in one semester

Workload	170 minutes laboratory practice
Credits	1 Credits/1.7 ECTS
Prerequisites	: Organic Chemistry I (FAF221111)
Course Learning Outcomes (CLO)	 Students are able to apply the oxidation reaction of primary alcohol compounds in the synthesis of aldehyde group compounds Students are able to apply nucleophilic acyl substitution reactions of acid anhydride compounds in the synthesis of amide group compounds Students are able to apply the oxidation reaction of primary alcohol compounds in the synthesis of carboxylic acid group compounds Students are able to apply the alpha substitution reaction of ketone compounds in the synthesis of haloform group compounds Students are able to apply the carbonyl condensation reaction in the synthesis of dibenzalacetone compounds
Description	: This practical work contains topics related to the principles and reaction methods involved in the synthesis of organic compounds, such as acetaldehyde, paracetamol, benzoic acid, iodoform, and pentagamavuton-0 (PGV-0). It also addressed the principles and techniques for purifying synthesized compounds, as well as the principles

	and techniques for qualitative identification of the synthesized compounds.
Examination Format/Assessment Methods	: 10% Lab work, 15% Presentation, 25% Project, 15% Practical report, 35% Practical FInal Test.

Advanced Pharmacy Practice	2
Code/Status	: FAF221301/Compulsory
Level	: Undergraduate
Semester	: III
Course	: Support Team:
Coordinator/Lecturer	apt. Arief Rahman Hakim, M.Si. (Koordinator)
	Dr. apt. Purwantiningsih, M.Si.
	apt. Sisca Ucche, M.Pharm.Sc., Ph.D
Language	: Indonesian, English
Teaching	: Students are designed to gain experience in listening to
Method/Duration of	lecturers' explanations, discussing, expressing opinions,
Classes per Week for One	working independently or working in groups to solve a
Semester	given case.
	100 minutes per week for 14 weeks in one semester
Workload	: 100 minutes in the classroom, 100 minutes of structured
	activities, 100 minutes of weekly self-directed learning.
Credits	: (2 Credits/3.4 ECTS)
Prerequisites	: Anatomy of Human Physiology, Pharmacology I
Course Learning	: 1. Students are able to explain the definition and benefits
Outcomes (CLO)	of pharmacokinetics and their relationship with other
	fields of science, kinetics order, compartment model
	and pharmacokinetic parameters, and are able to
	determine drug pharmacokinetic parameters using an
	open single-compartment model after intravascular
	administration of blood and urine data.
	2. Students were able to determine the pharmacokinetic
	parameters of the drug using a two-compartment open
	model after intravascular and extravascular
	administration.
	3. Students were able to determine drug pharmacokinetic
	parameters using an open-compartment model after
	extravascular administration using blood data, and drug
	pharmacokinetics using the non-compartmental
	model method
Description	: This course contains topics about the fate of drugs in the
ı	body (absorption, distribution, metabolism and excretion),
	definition of pharmacokinetics, order of kinetics,
	pharmacokinetics models, pharmacokinetics parameters.
	The determination of drug pharmacokinetics parameters
	uses a compartment model, both an open
	single-compartment model and an
	open-two-compartment model, a non-compartmental
	drug pharmacokinetics model. In the pharmacokinetics
	course, emphasis is placed on the determination of drug

Pharmacokinetics (2 Credits/3.4 ECTS)

	pharmacokinetics parameters and parameter hierarchy.
Examination	: 30% Assignment, 30% Quiz, 20% midterm exam, 20% final
Format/Assessment Methods	exam.

Module 24: Experimental Pharmacology and Toxicology I

Advanced Pharmacy Practice				
Code/Status	:	FAF 221302/Compulsory		
Level	:	Undergraduate		
Semester	:	III		
Course Coordinator/Lecturer	:	Dr. apt. Soni Siswanto, M.Biomed Prof. Dr. apt. Agung Endro Nugroho, M.Si. Dr. apt. Arief Nurrochmad, M.Si., M.Sc. apt. Purwantiningsih, M.Si., Ph.D. Dr. apt. Nunung Yuniarti, M.Si. drh. Retno Murwanti, MP., Ph.D. apt. Arief Rahman Hakim, M.Si.		
		Dr. apt. Dyaningtyas Dewi, M.Sc.		
		apt. Sisca Ucche, Ph.D,		
Language	•	Indonesian, English		
Teaching Method/Duration of Classes per Week for One Semester	:	SCL: Case-based Learning 170 minutes per week for 14 weeks in one semester		
Workload	:	170 minutes laboratory practice		
Credits	:	(1 Credits/1.7 ECTS)		
Prerequisites	:	Pharmacology 1		
Course Learning Outcomes (CLO)	:	 Students can describe the principles of experimental pharmacology, in silico, in situ, in vitro, ex vivo, ex-ovo, and in vivo; they can identify and explain information on various routes of pharmaceuticals administration to test animals and analyze their effects on drug absorption. Students can identify and explain information on drug metabolism and the elements that impact it, as well as assess it. Students can find and explain information regarding the timing of sampling and assumptions of compartment models and selection of doses in pharmacokinetics; determination of pharmacokinetic parameters of a drug after administration of a single dose; and have skills in taking samples of experimental animals. Students can find and explain information about dose-response relationships based on quantal responses and gradual responses. 		
		 Students can find and explain information about the dose-response relationship in analgesic and anti-inflammatory tests. 		

Experimental Pharmacology and Toxicology I (1 Credits/1.7 ECTS)

Description	:	Animal handling, basic techniques for drug administration, understanding of drug metabolism and the factors that influence it, how to analyze drugs in blood and urine and validate them, test pharmacological activity: anti-inflammatory, analgesic, antipyretic, sedative-hypnotic, evaluation of dose-response relationship, i.e. evaluation of gradual and quantal response, application of statistical software in probit analysis are all covered in the Experimental Pharmacology and Toxicology Course. The learning approach is practicum, which is immediately followed by questions and answers, as well as discussion, to ensure that students comprehend each of the sub-subjects presented. While the technique of evaluation is based on pretest scores, lab activity performance, reports, conversations, and replies.
Examination	:	Activity 25%, Interim report 10%, Final report 15%, Response test 40%,
Format/Assessment		Quiz 10%

		drugs, immunosuppressants and drugs on the respiratory system		
		and antibiotic drugs		
		6. Students are able to search for and explain information		
		regarding the molecular mechanisms of action of drugs as		
		antiparasitic, antineoplastic, antiviral and antifungal		

Description	:	Pharmacology II contains a discussion of drug interactions and receptors as targets of drug action, various receptors based on signal transduction, pharmacology and molecular mechanisms of drug action on the cardiovascular system (anticoagulant, antiplatelet, antihyperlipidemia, atherosclerosis), respiratory system (bronchodilator, mucolytic, antitussive, secretion inhibitor mucus), endocrine system (antithyroid, antiandrogen, antidiabetic, estrogen-progestin), digestive system (antiemetic, antacid, laxative, H2 receptor antagonist, proton pump inhibitor), and pharmacology of anti-inflammatory drugs, antipyretic analgesics, antihistamines, corticosteroids and immunosuppressants, antibiotics , antiparasitic, antiviral, antifungal and antineoplastic
Examination	:	Interim report 45%, Final report 50%, Quiz 5%

Advanced Pharmac	y Practice		
Code/Status	: FAF 221401/Compulsory		
Level	Undergraduate		
Semester	IV		
Course Coordinator/Lectu rer	Dr. apt. Purwantiningsih, M.Si. apt. Arief Rahman Hakim, M.Si.		
Language	: Indonesian, English		
Teaching Method/Duration of Classes per Week for One Semester	 Learning will be carried out using several methods: Tutorial, where students will listen to the lecturer's explanation Discussion, where students will ask questions or answer questions on a problem Case-based learning, students will be given a case, then asked to work on the case (according to the presentation in the lecture) 		
	100 minutes per week for 14 weeks in one semester		
Workload	 100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning. 		
Credits	: 2 Credits/3.4 ECTS		
Prerequisites	: Pharmacocinetic		
Course Learning Outcomes (CLO)	 Students are able to explain the definition and benefits of clinical pharmacokinetics/TDM, and factors that can affect the results of therapy, namely drug factors, internal factors, and external factors, and are able to determine drug dosage regimens after administering drugs via continuous intravenous infusion, repeated intravenous infusion, repeated bolus intravenous injection, repeated oral administration. Students are able to determine creatinine clearance estimates and dosage regimens in patients with decreased kidney and liver function, special drug dosage regimens and TDM (digoxin, theophylline, aminoglycosides, cyclosporine). 		
Description	: The course of Clinical Pharmacokinetics/TDM is the application of pharmacokinetics in the clinic to design dosage regimens for individual patients. Drug dosage regimens include continuous intravenous infusion, repeated intravenous infusion, repeated bolus intravenous injection, and repeated oral administration. Estimation of creatinine clearance and drug dosage regimens in patients with decreased kidney and liver function, special drug dosage regimens (digoxin, theophylline, and aminoglycosides, cyclosporine), and monitoring of drug levels in the blood (therapeutic drug		

Clinical Pharmacokinetics-TDM (2 Credits/3.4 ECTS)

	monitoring, TDM) are carried out in pathological conditions, drug
	interactions.
Examination Format/Assessme nt Methods	: 10% Participative, 20% Quiz, 35% midterm exam, 35% final exam.

Method/Duration of		170 minutes per week for 14 weeks in one semester
Classes per Week for		
One Semester		
Workload	:	170 minutes laboratory practice
Credits	:	(1 Credits/1.7 ECTS)
Prerequisites	:	Pharmacology II, Toxicology
Course Learning	:	1. Students are able to determine the pharmacokinetic
Outcomes (CLO)		parameters of drugs after a single dose using blood and urine
		data.
		2. Students are able to analyze data from experiments with
		laboratory animals to see the effects of drugs that can lower
		blood pressure in vivo using the non-Invasive Blood Pressure
		System method and evaluate the efficacy of a hypertension
		drug, as well as understand research designs for
		antihypertensive trials.
		3. Students are able to analyze data from experiments with
		laboratory animals to see the effects of drugs that can lower
		blood pressure in vivo using the non-Invasive Blood Pressure
		System method and evaluate the efficacy of a hypertension
		drug, as well as understand research designs for
		antihypertensive trials.

Experimental Pharmacology and Toxicology II (1 Credits/1.7 ECTS)

		 4. Students can recognize, practice and carry out experiments involving histamine receptors and are able to determine the pD2 value of antihistamines using isolated guinea pig tracheal organ pharmacology tests, prepare guinea pig tracheal organs, set up tools, add agonists to isolated organs, observe the process and collect data on tracheal smooth muscle contractions. 5. Students are able to understand and carry out in vitro drug metabolism tests.
Description	:	Experimental Pharmacology and Toxicology II Practicum contains the practice of determining pharmacokinetic parameters of drugs after a single dose based on drug levels in blood and urine, antihypertensive tests, teratogenic tests, receptors as targets of drug action (histamine receptors) and drug metabolism. The learning method is carried out with practicums that are directly followed by questions and answers and discussions so that students understand each sub-topic given. While the assessment method is based on the value of interim reports, pretests, activities (discussions), official reports, and responses.
Examination Format/Assessment Methods	:	Presence 10%, interim report 10%, Pretest 10%, Activity 20%, Final report 20%, post-test 10%, Response test 20%
Learning Media	:	Offline learning utilizing eLOK as LMS. 25% online learning with zoom platform

amendment

Advanced Pharmacy Practice				
Code/Status	:	FAF 221403/Compulsory		
Level	:	Undergraduate		
Semester	:	IV		
Course Coordinator/Lectu rer	:	Dr. apt. Fita Rahmawati, Sp.FRS. (Coord)) Prof. Dr. apt. Tri Murti Andayani, Sp.FRS. Prof. Dr.apt. Zullies Ikawati, M.Sc. Dr. apt. Nanang Munif Yasin, M. Pharm apt. Firdhani Satya Primasari, M.Clin.Pharm apt. Maya Ramadhani Indarto, M.Clin.Pharm		
Language	:	Indonesian, English		
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be carried out using several methods: Tutorial, where students will listen to the lecturer's explanation Discussion, where students will ask questions or answer questions about a problem Project-based learning (Team-based Project), where students will be divided into several groups, then given a task to be completed together, and the completion of the task will be made in the form of a short report and presented to the lecturer and other students in the course. Case-based learning / PBL / other SCL methods, students will be given real problems in society, then asked to identify the root of the problem and try to find a way out (according to the presentation in the lecture) minutes per week for 14 weeks in one semester 		
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning.		
Credits	:	2 Credits/3.4 ECTS		
Prerequisites	:	Pharmacocinetic		
Course Learning Outcomes (CLO)	:	 Understand the principles of rational pharmacotherapy, identification of drug-related problems (DRP) and literature search for evidence-based medicine (EBM) Understanding pathophysiology, pharmacotherapy, monitoring effectiveness and side effects of drugs, as well as providing information and education to patients with pain and rheumatological disorders Understanding pathophysiology, pharmacotherapy, monitoring effectiveness and side effects of drugs, as well as providing information and education on endocrine disorders Understanding pathophysiology, pharmacotherapy, monitoring effectiveness and side effects of drugs, as well as providing information and education on endocrine disorders Understanding pathophysiology, pharmacotherapy, monitoring effectiveness and side effects of drugs, as well as providing information and education on cardiovascular disorders 		

Pharmacotherapy I (2 Credits/3.4 ECTS)

Description	: This course studies rational pharmacotherapy and therapy monitoring drug-related problems (DRPs), evidence-based medicine (EBM) pharmacotherapy of pain and headache, osteoarthritis and rheumatoic arthritis, osteoporosis, diabetes mellitus, thyroid disorders, menstrua disorders, hypertension, dyslipidemia, ischemic heart disease (IHD), acute coronary syndrome (ACS), and ischemic stroke.
Examination Format/Assessme nt Methods	: 10% Participatory 20% project result 50%, midterm exam 20% final exam.
Learning Media	: https://elok.ugm.ac.id Offline: 70%; Online: 30%

Advanced Pharmacy Pra	ctice	
Code/Status	:	FAF 221307/Compulsary
Level	:	Undergraduate
Semester	:	IV
Course Coordinator/Lecturer	:	apt. Eka Noviana, S.Farm., M.Sc., Ph.D. Dr. apt. Agustina Ari Murti Budi Hastuti, M.Sc. apt. Halida Rahmania, S.Farm., M.Agr.Sc., Ph.D. Dr. Cintya Nurul Apsari, S.T.P., M.Si. Dr. rer. nat. apt. Siti Nurul Hidayah, M.Sc. (Koordinator)
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	SCL: Team-based Project consists of oral pre-test and discussion, practicum, objective structured clinical examination (OSCE) based evaluation (dry-lab). 170 minutes per week for 14 weeks in one semester
Workload	:	170 minutes laboratory practice
Credits	:	(1 Credits/1.7 ECTS)
Prerequisites	:	Analytical Chemistry II
Course Learning Outcomes (CLO)	:	 understand the ways of separation, identification, and quantification using chromatographic methods apply chromatographic methods for identification and quantification of drugs, drug raw materials and chemicals able to process analytical data from the results of chromatographic methods
Description	:	This practicum supports the chromatography course (FAF 221406). In this practicum, lab work is carried out which includes the application of chromatographic methods for qualitative analysis (identification) and quantitative analysis related to quality assurance of drugs and medicinal materials. Methods performed in the lab include thin layer chromatography (TLC), column chromatography (CC), gas chromatography (GC), and high-performance liquid chromatography (HPLC).
Examination	:	Pre-lab test 10%, oral pretest and discussion 30%, Lab work 10%, Lab
		report 25%, OSCE-like exam 25%
Format/Assessment Methods

Module 90: Indonesian Language and Scientific Writing[AH12]

Advanced Pharmacy Prac	tice	
Code/Status	:	UNUIB 212201/Compulsary
Level	:	Undergraduate
Semester	:	IV
Course	:	UGM Indonesian Language Education Course Team
Coordinator/Lecturer		
Language	:	Indonesian, English
Teaching	:	Discussion, team work, individual task, presentation
Method/Duration of		100 minutes per week for 14 weeks in one semester
Classes per Week for		
One Semester		
Workload	:	100 minutes in the classroom, 100 minutes of structured activities,
		100 minutes of weekly self-directed learning.
Credits	:	(2 Credits/3.4 ECTS)
Prerequisites	:	
Course Learning Outcomes (CLO)	:	 Knowledge, students are able to explain effective sentence models and explain the composition of scientific writing well. Skill, students are able to using spelling and diction correctly, composing effective sentences, composing cohesive and communicative paragraphs, applying scientific writing techniques properly and correctly, planning essays according to the chosen topic. Attitude, students are able to have high appreciation for Indonesian as a medium of scientific communication, have high loyalty, dedication, and tolerance both in working independently and in groups.
Description	:	This course is one of the compulsory courses that must be taken by students of Universitas Gadjah Mada. As a compulsory university course, this course provides knowledge and skills in using good and correct Indonesian in writing scientific papers. In addition, it also provides knowledge of research ethics and skills in avoiding plagiarism. In learning, lecture methods, discussions, case studies, problem solving, and practice will be utilized to achieve optimal results from learning objectives. Language practice using standard Indonesian, especially written varieties, will dominate assignments in lectures.

Indonesian Language and Scientific Writing (2 Credits/3.4 ECTS)

Examination Format/Assessment Methods	:	Task 20%, Participation 10%, paper 20%, midterm 20%, final-exam 30%

Advanced Pharmacy P	racti	ce	
Code/Status	:	FAF 221504/Compulsory	
Level	:	Undergraduate	
Semester	:	5	
Course Coordinator/Lecturer	:	 Prof. Dr. Tri Murti Andayani, SpFRS, Apt (Coordinator) Prof. Dr. Ika Puspitasari, M.Si., Apt Fivy Kurniawati, Mpharm., Apt Niken Nur Widyakusuma, S.Farm., M.Sc 	
Language	:	Indonesian, English	
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be conducted using several methods: Tutorial Discussion and Q&A Project-based learning (Team-based Project). In each class, students are divided into 16 groups. Each group will be given one question to be solved as a group by looking for at least 3 references to answer the related questions. The aspects asked are related to the application of biostatistics, variable and interpretation of study results, study design, and pharmacovigilance of pharmacoepidemiology studies. 	
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning.	
Credits	:	2 Credits/3.4 ECTS	
Prerequisites	:	Pharmacology (FAF 221203)	
Course Learning Outcomes (CLO)	:	 Students are able to explain the basic concepts of pharmacoepidemiology and biostatistical principles in the study of pharmacoepidemiology. Students are able to plan and select an appropriate design for pharmacoepidemiology study. Students are able to analyze the results of pharmacoepidemiology studies and the application of pharmacoepidemiology studies in pharmaceutical services. 	
Description	:	The course "Pharmacoepidemiology" explains the basic concepts of pharmacoepidemiology, biostatistical principles in epidemiological studies, research design in the field of pharmacoepidemiology, outcome parameters used in pharmacoepidemiological studies, and data sources in pharmacoepidemiological studies, so that students are able to apply the results of pharmacoepidemiological studies to identify, evaluate, and explain drug use problems and solutions at the population level.	

Prescription (2 Credits/3.4 ECTS)

Examination Format/Assessment Methods	:	15% participatory activities, 35% project, 25% midterm exam, 25% final exam.	
Learning Media	:	LMS (elok.ugm.ac.id)	
Literature	:	 Primary : Holloway, K. & van Djik, L., 2011, The World Medicines Situation 2011: Rational Use of Medicines, Geneva: World Health Organization. Rothman, K.J, 2012, Epidemiology an introduction, 2nd edition, Oxford University Press, New York Rosner, B, 2011, Fundamentals of biostatistics, 7th edition, Brooks/Cole Cengage Learning, Boston. 	

Module 54: Pharmacognosy - Phytochemistry

Advanced Pharmacy P	racti	се	
Code/Status	:	FAF 221505/Compulsory	
Level	:	Undergraduate	
Semester	:	5	
Course Coordinator/Lecturer	:	 Dr.rer.nat. Yosi Bayu Murti, M.Si., Apt. (Coordinator) Prof. Dr. Subagus Wahyuono, M.Sc., Apt. Dr. Erna Prawita Setyowati, M.Si., Apt. Dr. Andayana Puspitasari Gani, M.Si., Apt. 	
Language	:	Indonesian, English	
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be conducted using several methods: 1. Tutorial 2. Discussion 3. Project-based learning/PBL (Team-based Project) 100 minutes per week for 14 weeks in one semester 	
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning.	
Credits	:	2 Credits/3.4 ECTS	
Prerequisites	:	Organic Chemistry II (FAF 221211)	
Course Learning Outcomes (CLO)	:	 Students are able to explain the sources of efficacious substances and supporters of efficacy derived from nature Students are able to explain the diversity of structures, biosynthetic pathways and physical and chemical properties of natural material compounds Students are able to describe methods of identifying natural ingredient compounds in raw materials, simplisia and extracts by macroscopy, microscopy and physico-chemistry. 	
Description	:	The course "Pharmacognosy-Phytochemistry" discusses basic scientific aspects, the relationship between secondary metabolites or metabolite profiles (markers) in relation to the pharmacological / biological effects of natural medicinal products, including the structure of metabolite groups with bioactivity, chemical structure, qualitative / quantitative analysis, usefulness in medicine and the development of natural medicine in the health sector.	
Examination Format/Assessment Methods	:	62% participatory activities and project, 19% midterm exam, 19% final exam.	
Learning Media	:	LMS (elok.ugm.ac.id)

Module 58: Pharmaceutical Services

Pharmaceutical Services (3 Credits/5.1 ECTS)

Advanced Pharmacy Practice		
Code/Status	:	FAF 221512/Compulsory
Level	:	Undergraduate
Semester	:	5
Course	:	1. Dr. apt. Chairun W., M.Kes., M.App.Sc. Prof (Coordinator)
Coordinator/Lecturer		2. Prof. Dr. apt. Susi Ari Kristina, S.Farm., M.Kes.
		3. Dr. apt. Dwi Endarti, M.Si.
		4. apt. Muvita Rina Wati, S.Farm., M.Sc.
Language	:	Indonesian, English
Teaching	:	Learning will be conducted using several methods:
Method/Duration of		1. Tutorial
Classes per Week for		2. Discussion
One Semester		 Project-based learning/PBL (Team-based Project) 150 minutes per week for 14 weeks in one semester
		150 minutes in the classroom, 150 minutes of structured activities, 150
Workload	:	minutes of weekly self-directed learning.
Credits		3 Credits/5.1 ECTS
	<u>.</u>	Pharmacotherapy I (FAF 221403)
Prerequisites	•	
		Pharmaceutics II (FAF 221204)
Course Learning	:	1. Able to evaluate pharmaceutical services in accordance with the
Outcomes (CLO)		competence and role of the pharmacist profession in health
		services.
		2. Able to analyze problems related to drug related problems and
		medication errors and the role of pharmacists in Medication
		Therapy Management.
		3. Able to prepare a written patient care plan based on assessment
		4. Able to solve pharmaceutical service case problems in health
		centers, pharmacies, and hospitals.
Description	:	The course "Pharmaceutical Services" discusses the concept of
•		pharmaceutical services, the role of pharmacists in pharmaceutical
		services, rational drug use, problems in drug use (DRP, ME), drug
		interactions, patient data collection, as well as discussions on
		comprehensive pharmaceutical service case problems in the settings of
		health centers, pharmacies, and hospitals.
Examination	:	50% participatory activities and project, 30% midterm exam, 20% final
Format/Assessment Methods		exam.

Module 60: Laboratory Practice in Biopharmaceutics

Advanced Pharmacy Practice		
Code/Status	:	FAF 221502/Compulsory
Level	:	Undergraduate
Semester	:	5
Course Coordinator/Lecturer	:	 Prof. Dr. Akhmad Kharis Nugroho, M.Si., Apt. (Coordinator) Dr. Adhyatmika, M.Biotech., Apt. Dr. Marlyn Dian Laksitorini, M.Sc., Apt. Dr. Abdul Karim Zulkarnain, M.Si., Apt.
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be conducted using several methods: 1. Tutorial 2. Discussion 3. Project-based learning/PBL (Team-based Project) 170 minutes per week for 14 weeks in one semester
Workload	:	170 minutes laboratory practice
Credits	:	1 Credits/1.7 ECTS
Prerequisites	:	Pharmacokinetics (FAF 221301)
Course Learning Outcomes (CLO)	:	 Understand and master the meaning, scope, objectives and benefits as well as the relationship of Biofarmasetics with pharmaceutical science and profession. Understand the factors that affect drug absorption, efforts to improve drug absorption, and the concept of drug absorption. Understand the importance of drug absorption studies in vitro, in situ and in vivo, and the concept of drug bioavailability. Understand drug formula design and drug product evaluation, to achieve optimal therapeutic effects Able to apply the concept of population-based biopharmaceutics modeling and computation, the concept of intrinsic dissolution speed of drugs to achieve optimal therapeutic effects. intrinsic dissolution speed of drugs for the formulation of their preparations, the process of absorption studies in vitro and in situ, as well as the process of absorption of drugs. in situ, and percutaneous drug absorption process.
Description	:	The course "Biofarmasetics" consists of learning through lectures (2 credits) and laboratory practice (1 credit). Overall, the Biofarmasetics course contains material on drug transport through biological membranes, physicochemical factors of drugs and drug products,

Laboratory Practice in Biopharmaceutics (1 Credits/1.7 ECTS)

	anatomical and physiological factors where drugs are applied, absorption properties of drugs, and drug absorption. physicochemical factors of drugs and drug products, anatomical and physiological factors where drugs are applied, absorption properties of drugs in vitro, in situ and in vivo. in vitro, in situ and in vivo, introduction to population-based biopharmaceutics approaches, bioavailability and bioequivalence of drug products, various factors that can affect the absorption of drugs and drug products, efforts to improving drug absorption, formula design
	Laboratory practice in Biopharmaceutics learns and practices firsthand the introduction of modeling and computational population-based biopharmaceutics. population-based biopharmaceutics modeling and computing, the importance of intrinsic dissolution velocity studies of drugs in the preformulation of its preparation; the effect of pH on per-oral absorption of drugs in vitro; the effect of pH on per-oral absorption of drugs in situ; and percutaneous absorption of drugs in vitro.
Examination Format/Assessment Methods	: 35% participatory activities and project, 25% laboratory practice, 20% midterm exam, 20% final exam.

Module 61: Laboratory Practice in Pharmacognosy - Phytochemistry

Advanced Pharmacy P	racti	ce
Code/Status	:	FAF 221505/Compulsory
Level	:	Undergraduate
Semester	:	5
Course Coordinator/Lecturer	:	 Dr.rer.nat. Yosi Bayu Murti, M.Si., Apt. (Coordinator) Prof. Dr. Subagus Wahyuono, M.Sc., Apt. Dr. Erna Prawita Setyowati, M.Si., Apt. Dr. Andayana Puspitasari Gani, M.Si., Apt.
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be conducted using several methods: 1. Tutorial 2. Discussion 3. Project-based learning/PBL (Team-based Project) 170 minutes per week for 14 weeks in one semester
Workload	:	170 minutes laboratory practice
Credits	:	1 Credits/1.7 ECTS
Prerequisites	:	Organic Chemistry II (FAF 221211)
Course Learning Outcomes (CLO)	:	 Students are able to explain the sources of efficacious substances and supporters of efficacy derived from nature Students are able to explain the diversity of structures, biosynthetic pathways and physical and chemical properties of natural material compounds Students are able to describe methods of identifying natural ingredient compounds in raw materials, simplisia and extracts by macroscopy, microscopy and physico-chemistry.
Description	:	The course "Laboratory Practice in Pharmacognosy-Phytochemistry" discusses basic scientific aspects, the relationship between secondary metabolites or metabolite profiles (markers) in relation to the pharmacological / biological effects of natural medicinal products, including the structure of metabolite groups with bioactivity, chemical structure, qualitative / quantitative analysis, usefulness in medicine and the development of natural medicine in the health sector.
Examination Format/Assessment Methods	:	62% participatory activities and project, 19% midterm exam, 19% final exam.
Learning Media	:	LMS (elok.ugm.ac.id)

Module 62: Laboratory Practice in Prescription

Code/Status	:	FAF 221509/Compulsory
Level	:	Undergraduate
Semester	:	5
Course Coordinator/Lecturer	:	 Dr. Susi Ari Kristina, M. Kes., Apt. (Coordinator) Dr. Nanang Munif Yasin., M.Pharm., Apt. Muvita Rina Wati, M.Si., Apt.
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be conducted using several methods: Tutorial, where students will listen to the lecturer's explanation Discussion, where students will ask questions or answe questions about a problem 3. Project-based learning (Team-based Project), where students will be divided into several groups, then given a task to be completed together, and the completion of the task will be made in the form of a short report and presented to the lecturer and othe students in the course. 170 minutes per week for 14 weeks in one semester
Workload	:	170 minutes laboratory practice
Credits	:	1 Credits/1.7 ECTS
Prerequisites	:	Pharmaceutics II (FAF 221204) Pharmacotherapy I (FAF 221403)
Course Learning Outcomes (CLO)	:	 Students can solve the administrative and pharmaceutica problems of prescription in the community, primary care clinics (Puskesmas), clinics, and hospitals Students can solve clinical problems of prescriptions in the community, primary care clinics (Puskesmas), clinics, and hospitals Students can solve incompatibility in the compounding cases of the sterile preparations and veterinary prescriptions Students can dispense prescriptions to the patients following the procedures
Description	:	The course "Laboratory Practice in Prescription" discusses the basic or prescription, copy of prescription, dispensing and its regulatory, and administrative, pharmaceutics, and clinical screening of prescriptions. This course is given in 2 main forms, namely lectures in the classroom and also practicum. Practicum is conducted to provide students with experience and skills on examples of screening of prescriptions and compounding and dispensing skills.

Laboratory Practice in Prescription (1 Credits/1.7 ECTS)

Module 65: Radiopharmacy and Chemotherapy

Code/Status	: FAF 221515/Compulsory
Level	: Undergraduate
Semester	: 5
Course Coordinator/Lecturer	 Dr. Hilda Ismail, M.Si, Apt (Coordinator) Dr. Fita Rahmawati, M.FRS, Apt drh. Retno Murwanti, M.P., Ph.D. Dr.rer.nat. Adam Hermawan, MSc., Apt.
Language	: Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	 Learning will be carried out using two methods: Teacher-centered learning: the lecturer explains lecture materia to students. Team-based project: students work in groups on assignments accompanied by a supporting lecturer. 100 minutes per week for 14 weeks in one semester
Workload	: 100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning.
Credits	: 2 Credits/3.4 ECTS
Prerequisites	: Basic Pharmaceutical Chemistry (FAF 221109) Pharmacotherapy (FAF 221403)
Course Learning Outcomes (CLO)	 Understand the scope of radiopharmaceuticals and explain the dangers and benefits of radioactive substances in the world o pharmacy and medicine, their use for diagnostics, therapy and analysis. Understand and explain the principles of radiopharmaceutical preparations and the quality control. Understand and explain the pathophysiology, principles of cance therapy and chemotherapy as well as the preparation o cytostatic drugs Understand and explain pharmacotherapy evaluation for severa types of cancer and the plan monitoring, information and education on drug therapy.
Description	: This course studies the principles, preparation and quality control as well as the application of radiopharmaceuticals in disease diagnosis and therapy, introduction to cancer, the basics of administering chemotherapy, supportive therapy in cancer treatment, pathophysiology and therapeutic management of cervical, breast, leukemia and lymphoma cancers.

Radiopharmacy and Chemotherapy (2 Credits/3.4 ECTS)

Note : Including reference sources from forms of integration of Research and/or Community Service into courses

Module 67: Pharmaceutical Biotechnology

Pharmaceutical Biotechnology (2 Credits/3.4 ECTS)

Code/Status	: FAF 221603/Compulsory
Level	: Undergraduate
Semester	: 6
Course Coordinator/Lecturer	: Dr. apt. Muthi' Ikawati, M.Sc. (Coordinator) Dr. apt. Riris Istighfari Jenie, M.Si. apt. Purwanto, M.Sc., Ph.D. apt. Setyowati Triastuti Utami, M.Sc., Ph.D.
Language	: Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	 Learning will be conducted using several methods: Flipped learning, students study materials individually uploaded to eLOK Lecturer Tutorial Student-center learning (SCL): project-based learning (team-based project, TBP) 100 minutes per week for 14 weeks in one semester
Workload	: 100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning
Credits	2 Credits/3.4 ECTS
Prerequisites	: Molecular Biology (FAF 221201)
Course Learning Outcomes (CLO)	 Students are able to explain the basic concepts (understanding of pharmaceutical biotechnology and its applications for molecular disease detection and therapeutic development using biotechnology products Students are able to understand the principles of genetic engineering (recombination of DNA) in plants and animals for the production of biopharmaceutics Students are able to apply secondary metabolite productior processes with genetic engineering techniques Students are able to apply the basic principles of genetic engineering in the production of antibodies, vaccines engineering proteins, and biosimilars Students are able to interpret (evaluate) the latest results of pharmaceutical biotechnology research from related scientific

Description	: The pharmaceutical biotechnology course deals with applications of molecular biology in pharmaceuticals that include: (1) biopharmaceutical production including therapeutic proteins, antibodies, vaccines with genetic engineering techniques in animals or plants; protein and biosmiliary engineering; as well as (2) secondary metabolite production with genetically engineered techniques, and (3) introduction of development therapies using biotech products, among other things immunotherapy, gene therapy, oligonucleotides, and stem cell therapy. Additionaly, this course also introduces regulation and bioethics in biotechnology.
Examination Format/Assessment Methods	: 50% participatory activities and project, 25% midterm exam, 25% final exam.

Module 69 : Pharmacoeconomics

Pharmacoeconomics (2 Credits/3.4 ECTS)

Advanced Pharmacy P	racti	ce
Code/Status	:	FAF 221605/Compulsory
Level	:	Undergraduate
Semester	:	6
Course	:	Dr. Dwi Endarti, M.Sc., Apt (Coordinator)
Coordinator/Lecturer		Prof. Dr. Satibi, M.Si, Apt
		Dr. Susi Ari Kristina, M.Kes, Apt
		Dr. Tri Murti Andayani, Sp.FRS., Apt
Language	:	Indonesian, English
Teaching	:	Learning will be conducted using several methods:
Method/Duration of		1. Tutorial
Classes per Week for		 Discussion Project-based learning/PBL (Team-based Project)
One Semester		100 minutes per week for 14 weeks in one semester
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100
	-	minutes of weekly self-directed learning
Credits	:	2 Credits/3.4 ECTS
Prerequisites	:	Pharmacotherapy I (FAF 221403)
Course Learning	:	1. Mastering the principles of pharmacoeconomics to optimize
Outcomes (CLO)		therapy and cost calculation in pharmacoeconomics
		2. Mastering the principles of outcome measurement in
		pharmacoeconomics
		3. Mastering pharmacoeconomic research design to solve problems
		related to aspects of efficacy, safety, and cost of pharmaceutical
		preparations to optimize therapy
		4. Understand pharmacoeconomics with approaches and modeling
		and master the interpretation and implementation of the results
		of pharmacoeconomic studies to optimize therapy.
Description	:	The Pharmacoeconomics course contains topics on the introduction to
		the discipline of pharmacoeconomics, various methods of
		pharmacoeconomic studies (Cost of Illness, Cost-minimization analysis,
		Cost-effectiveness analysis, Cost-Benefit analysis, Cost-utility analysis),
		how to measure costs and outcomes (clinical, economic and humanistic)
		in pharmacoeconomic studies. humanistic) in pharmacoeconomic studies,
		model-based pharmacoeconomic study approaches, interpretation and
		implementation of pharmacoeconomic study results.

Examination Format/Assessment Methods	: 40% participatory activities and project, 30% midterm exam, 30% final exam.

		pharmacotherapy, monitoring the effectiveness and side effects

	of drugs, as well as providing information and education in patients with neurological disorders 5. Students are able to understand the principles of therapy in special population patients
Description	: The course "Pharmacotherapy III" studies the therapeutic management of electrolyte and acid-base balance disorders, acute kidney injury (AKI) and drug-induced renal disease, chronic kidney disease (CKD), complications of chronic kidney disease, anemia, benign prostate hyperplasia (BPH), systemic lupus hyperplasia (BPH). chronic kidney disease, anemia, benign prostate hyperplasia (BPH), systemic lupus erythematosus (SLE), epilepsy, Parkinson's disease, anxiety and depression, schizophrenia and bipolar disorder, as well as therapeutic principles in pediatric and geriatric patients. pediatrics and geriatrics, pregnant and lactating, and with renal and hepatic dysfunction.
Examination Format/Assessment Methods	: 30% participatory activities and project, 35% midterm exam, 35% final exam.
Learning Media	: LMS (elok.ugm.ac.id)
Literature	 Primary : 1. Dipiro, J.T., et al. 2011, Pharmacotherapy: A Pathophysiologic Approach, 8th Ed, McGraw-Hill, New York

Module 71 : Clinical Pharmacy

Clinical Pharmacy (1 Credits/1.7 ECTS)

Advanced Pharmacy P	racti	ce
Code/Status	:	FAF 221605/Compulsory
Level	:	Undergraduate
Semester	:	6
Course Coordinator/Lecturer	:	Prof. Dr. apt. Tri Murti Andayani, Sp.FRS. (Coordinator) Prof. Dr. apt. Zullies Ikawati Dr. apt. Fita Rahmawati, Sp.FRS. Dr. apt. Nanang Munif Yasin, M.Pharm. apt. Woro Harjaningsih, Sp.FRS. apt. Arief Rahman hakim, S.Si., M.Si apt. Arief Rahman hakim, S.Si., M.Si apt. Maya Ramadhani Indarto, S.Farm., M.Clin.Pharm apt. Firdhani Satia Primasari, S.Farm., M.Clin.Pharm apt. Anggraeni Citra RB., S.Farm. M.Clin.Pharm apt. Taufiqurohman, S.Farm., M.Clin.Pharm
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be conducted using several methods: Tutorial, where students will listen to the lecturer's explanation Case-based Learning, where students will be divided into several groups, then given one case of a particular disease to be solved together. The resolution of the case will be made in the form of a short report and presented in front of lecturers and other students in the course. Presentations and discussions, where students will present the results of the case analysis given
Workload	:	50 minutes in the classroom, 50 minutes of structured activities, 50 minutes of weekly self-directed learning
Credits	:	1 Credits/1.7 ECTS
Prerequisites	:	Pharmacotherapy I (FAF 221403)
Course Learning Outcomes (CLO)	:	 Able to explore patient history to identify problems related to the efficacy and safety of pharmaceutical preparations Able to search scientific literature and critical appraisal to optimize therapy Able to identify and solve problems related to the efficacy and safety of pharmaceutical preparations in rheumatology, endocrinology, and gastrointestinal cases

	 4. Able to identify and solve problems related to the efficacy and safety of pharmaceutical preparations in cardiovascular and respiratory cases 5. Able to dispensing aseptic preparations and IV admixtum appropriately to optimize therapy
Description	: This course studies how to dig patient history, search evidence-based medicine literature, critical appraisal, and pharmaceutical care in rheumatology, endocrinology, gastrointestinal, cardiovascular, respiratory and dispensing aseptic preparations and IV admixture.
Examination Format/Assessment Methods	: 10% participatory activities, 50% case study, 10% midterm exam, 30% final exam.
Learning Media	: LMS (elok.ugm.ac.id)
Literature	 Primary : Dipiro, J.T., et al. 2011, Pharmacotherapy: A Pathophysiologic Approach 8th Ed, McGraw-Hill, New York
	 Additional : 1. Module 72 : Phytotherapy

Phytotherapy (2 Credits/3.4 ECTS)

Advanced Pharmacy P	ractio	ce
Code/Status	:	FAF 221608/Compulsory
Level	:	Undergraduate
Semester	:	6
Course Coordinator/Lecturer	:	Dr. rer. nat. Nanang Fakhrudin, M.Si., Apt. (Coordinator) Prof. Dr. Triana Hertiani, M.Si. Apt. Prof. Dr. Erna Prawita, S., M.Si., Apt. Dr. Indah Purwantini, M.Si., Apt.
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be conducted using several methods: Tutorial, where students will listen to the lecturer's explanation Discussion, where students will ask questions or answer questions about a problem Case-based learning / PBL / other SCL methods, students will be given real problems in society, then asked to identify the root of the problem and try to find a solution (in accordance with the exposure in the lecture) Project-based learning (Team-based Project), where students will be divided into several groups, then given a task to be completed together, and the completion of the task will be made in the form of a short report and presented to the lecturer and other students in the course. 100 minutes per week for 14 weeks in one semester
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning
Credits	:	2 Credits/3.4 ECTS
Prerequisites	:	Pharmacology II (FAF 221303) Pharmacotherapy I (FAF 221403)
Course Learning Outcomes (CLO)	:	 Students are able to apply applicable regulations or laws applicable regulations or laws in solving problems related to the application of phytotherapy or traditional medicine development Students are able to explain the selection of ingredients in the preparation of formula of traditional medicinal herbs Students are able to provide rational phytotherapy recommendations for respiratory, digestive, and excretory system disorders. Students are able to provide rational phytotherapy recommendations for cancer diseases and phytotherapy for health maintenance, fitness, and vitality.

	 Students are able to provide rational phytotherapy recommendations for cardiovascular system disorders, diabetes mellitus, hyperlipidemia, and are able to explain the safety aspects of traditional medicine.
Description	: The course is related to the treatment of diseases using natural materials (traditional medicine), especially medicinal plants. This course studies the definition, scope, history, development, basic concepts, and regulations in phytotherapy. In addition, it will also discuss the potential pharmaceutical interactions, pharmacodynamic and pharmacokinetic interactions, phytotherapy interactions with synthetic drugs, efficacy claims and supporting data in phytotherapy preparations, and phytotherapy in the context of government programs such as herbal medicine scientification. Phytotherapy for diseases commonly suffered by Indonesian people, such as disorders of the digestive system, respiratory system, cardiovascular system, excretory system, diabetes, cancer, hypercholesterolemia, as well as phytotherapy for maintaining health, fitness, and vitality.
Examination Format/Assessment Methods	: 51% project, 15% quiz, 17% midterm exam, 17% final exam.
Learning Media	: LMS (elok.ugm.ac.id)

Module 73 : Technology and Formulation of Sterile Preparations

Advanced Pharmacy P	racti	ce
Code/Status	:	FAF 221609/Compulsory
Level	:	Undergraduate
Semester	:	6
Course	:	Dr. rer. nat. Ronny Martien, M.Si. (Coordinator)
Coordinator/Lecturer		Dr. Eng. apt. Khadijah, M.Si.
		Farida Nur Aziza, S. Farm., M.GMP., Apt.
Language	:	Indonesian, English
Teaching	:	Learning will be conducted using combination of tutorials and Team
Method/Duration of		Based Learning activities method
Classes per Week for One Semester		100 minutes per week for 14 weeks in one semester
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100
		minutes of weekly self-directed learning
Credits	:	2 Credits/3.4 ECTS
Prerequisites	:	Physical Pharmacy II (FAF 221108)
Course Learning	:	1. Students are able to explain the concepts and basics of
Outcomes (CLO)		formulation and technology of sterile preparations
		2. Students are able to design sterile pharmaceutical preparation
		formulas and their packaging
		3. Students are able to analyze the quality of sterile pharmaceutical
		preparations
		4. Students are able to apply the concepts of formulation and
<u> </u>		technology in sterile preparations
Description	:	The course "Technology and Formulation of Sterile Preparations" contains
		material on introduction, sterile preparation requirements, carrier and
		solvent materials, packaging, sterilization, microbial inactivation, sterile
		preparation requirements, formulation and preparation of parenteral preparations, quality control, and sterile preparations. requirements,
		formulation and manufacture of parenteral preparations, quality control,
		and ophthalmic preparations. ophthalmic preparations.
Examination Format/Assessment	:	25% participatory activities, 25% project, 10% quiz, 20% midterm exam, 20% final exam.

Module 76 : Laboratory Practice in Extraction Technology of Natural Products

Code/Status	: FAF 221613/Compulsory
Level	: Undergraduate
Semester	: 6
Course Coordinator/Lecturer	 Prof.Dr.rer.nat.apt. Dr. apt. Triana Hertiani, M.Si (Coordinator) Dr. apt. Andayana Puspitasari Gani, M.Si Dr.rer.nat. apt. Yosi Bayu Murti, M.Si. Dr.rer.nat. apt. Nanang Fakhrudin, M.Si.
Language Teaching Method/Duration of Classes per Week for	 Indonesian, English Learning will be conducted using Team-Based Project (TBP) method 170 minutes per week for 14 weeks in one semester
One Semester Workload	: 170 minutes laboratory practice
Credits	1 Credits/1.7 ECTS
Prerequisites Course Learning Outcomes (CLO)	 Pharmacognosy - Phytochemistry (FAF 221505) Students are able to apply the selection of appropriate ray materials for extraction Students are able to carry out extraction and its further stages to obtain extracts as raw materials for formulations Students are able to optimize extract production Students are able to apply the principles of standardization o natural materials in extract production
Description	: The course "Laboratory Practice in Extraction Technology of Natura Materials" studies the principles and stages of the production proces starting from the preparation of raw materials, the extraction process to the preparation of extracts for the formulation of galenical preparations the essential oil production process, and the standardization of both specific and non-specific parameters required.
Examination Format/Assessment Methods	: 60% participatory activities and project, 25% midterm exam, 15% final exam.
Learning Media	: LMS (elok.ugm.ac.id)

Drug Delivery System (2 Credits/3.4 ECTS)

Advanced Pharmacy Pr	acti	ce
Code/Status	:	FAF 221611/Compulsory
Level	:	Undergraduate
Semester	:	6
Course	:	Dr. apt. Adhyatmika, M.Biotech. (Coordinator)
Coordinator/Lecturer		Prof. Dr. apt. Abdul Karim Zulkarnain, M.Si.
		Dr. apt. Marlyn Dian Laksitorini, M.Sc.
		Dr.rer.nat. Ronny Martien, M.Si.
Language	:	Indonesian, English
Teaching	:	Learning will be conducted using several methods : 1. Tutorials are delivered by lecturers face-to-face in class/online
Method/Duration of Classes per Week for		room.
One Semester		2. Discussions are held at the end of each segment between
		students and lecturers, and between fellow students in groups
		face-to-face in class/online space.
		3. Quizzes at the end of each Course Learning Outcomes (CLO)
		session as a learning evaluation. 4. Assignments in the form of cases/problems to be solved in
		groups.
		100 minutes per week for 14 weeks in one semester
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100
		minutes of weekly self-directed learning
Credits	:	2 Credits/3.4 ECTS
Prerequisites	:	Biopharmaceutics (FAF 221501)
Course Learning	:	1. Students are able to understand the influence of
Outcomes (CLO)		biopharmaceutics on successful drug delivery (membrane and
		biological structure, physicochemical properties, and mass
		transfer).
		2. Students are able to understand the concept of conventional oral
		and intravenous drug delivery and its limitations.
		3. Students are able to explain modified drug delivery strategies in
		solving conventional delivery problems (nano and micro
		technology-based particles, orally disintegrating tablets, enteric
		coatings, prodrugs, controlled release, nasal and pulmonary
		delivery, transdermal).
		4. Students are able to explain macromolecule and
		biopharmaceutical delivery strategies (peptides/proteins and
		vaccines). biopharmaceuticals (peptides/proteins and vaccines).

Description	: The course "Drug Delivery Systems" generally discusses aspects in the delivery process of pharmaceutically active compounds to reach their site of action in sufficient quantities in the body. These aspects include: (1) Biopharmaceutics influences on successful drug delivery (membrane and biological structures, physicochemical properties, and mass transfer), (2) Conventional oral and intravenous drug delivery and its limitations, (3) Modified drug delivery strategies in solving conventional delivery problems (nano- and micro-technology-based particles, orally disintegrating drugs, etc.). and micro technology-based particles, orally disintegrating tablets, enteric coatings, prodrugs, controlled release, nasal and pulmonary delivery, transdermal and pulmonary delivery, transdermal), and (4) Macromolecular and biopharmaceutical delivery strategies (peptides/proteins and vaccines).
Examination Format/Assessment Methods	: 20% participatory activities, 40% project, 20% midterm exam, 20% final exam.

Module 80: Pharmaceutical Industry

Pharmaceutical Industry (6 Credits/10.2 ECTS)

Advanced Pharmacy Pi	racti	ce
Code/Status	:	FAF 221703/Compulsory option
Level	:	Undergraduate
Semester	:	6
Course Coordinator/Lecturer	:	 Dr. apt. T.N. Saifullah S., M.Si. (Coordinator) Prof. apt. Dr. Sudibyo Martono, M.S. Dr.rer.nat. Tatang Irianti, M.Sc., apt Dr.rer.nat. Yosi Bayu Murti, M.Si. apt. Apt. Arief Rahman Hakim. M.Si. Dr. Eng. Khadijah, M.Si., Apt
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	Learning will be conducted using face-to-face learning method: opinion, in-class discussions, quizzes, FGDs, internships and reports 300 minutes per week for 14 weeks in one semester
Workload	:	300 minutes in the classroom, 300 minutes of structured activities, 300 minutes of weekly self-directed learning
Credits	:	6 Credits/10.2 ECTS
Prerequisites	:	Have taken at least 110 credits
Course Learning Outcomes (CLO)	:	 Students are able to develop quality pharmaceutical preparations Students are able to develop quality testing methods for raw materials and finished good Students are able to apply a quality assurance system to the entire process
Description	:	The elective course package "Industrial Pharmacy" is provided in the form of learning through lectures, discussions, internships, and FGDs. Overall, the Industrial Pharmacy Interest Option learns how to develop pharmaceutical and veterinary products along with aspects that must be considered in the manufacture of pharmaceutical preparations such as quality assurance, production management, PPIC management, technology manufacturing pharmaceutical preparations such as quality assurance, production management, PPIC management, process technology, process validation, development and FGDs. technology, process validation, development and procedures for the registration of pharmaceutical preparations. and procedures for registration of pharmaceutical and veterinary preparations.

Examination Format/Assessment Methods	: 50% participatory activities and project, 5% quizzes, 30% internships and reports, 15% FGD
Learning Media	:

Module 81: Community Pharmacy and Regulatory

Advanced Pharmacy P	racti	ce
Code/Status	:	FAF 221704/Compulsory option
Level	:	Undergraduate
Semester	:	6
Course Coordinator/Lecturer	:	 Dr. apt. Susi Ari Kristina, M. Kes. (Coordinator) Dr. apt. Anna Wahyuni Widayanti, MPH. Dr. apt. Tri Murti Andayani, SpFRS. Dr. apt. Nanang Munif Yasin, M.Pharm. Prof. Dr. apt. Satibi, M.Si Apt. Hardika Aditama, M.Sc.
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	Learning will be conducted using face-to-face learning method: opinion, in-class discussions, quizzes, FGDs, internships and reports 300 minutes per week for 14 weeks in one semester
Workload	:	300 minutes in the classroom, 300 minutes of structured activities, 300 minutes of weekly self-directed learning
Credits	:	6 Credits/10.2 ECTS
Prerequisites	:	Have taken at least 110 credits
Course Learning Outcomes (CLO)	:	 Students are able to analyze pharmaceutical practice activities in the community with the principles of professionalism, ethics and morals, in accordance with their authority and responsibilities. Students are able to make forms of health intervention in the community through the stages of need assessment, design intervention strategies, and evaluate the program. Students are able to analyze drug management activities and clinical pharmacy services in pharmacies and health centers. Students are able to analyze policy and regulatory issues in the community. and develop alternative solutions to these problems.
Description	:	The elective course package "Community Pharmacy and Regulation" discusses the principles of professionalism, ethics and morals, in accordance with the authority and responsibilities of pharmacists in pharmaceutical services; planning and design of health interventions in the community through the stages of need assessment, intervention strategies, and evaluation of the program; drug management skills and clinical pharmacy services in pharmacies and health centers are also provided in this course. In the final stage, policy and regulatory issues in the community are introduced and alternative solutions to these issues are examined using policy evaluation methods.

Community Pharmacy and Regulatory (6 Credits/10.2 ECTS)

Examination Format/Assessment Methods	: 55% participatory activities and project, 5% quizzes, 20% midterm exam, 20% final exam
Learning Media	:

Module 84: Distribution and Marketing Management

Code/Status	:	FAF 221707/Compulsory option
Level	:	Undergraduate
Semester	:	6
Course Coordinator/Lecturer	:	 Prof. Dr. Satibi, M.Si., Apt. (Coordinator) Dr. Dwi Endarti, M.Sc., Apt. Dr. Bondan Ardiningtyas, M.Sc., Apt. Dr. Anna Wahyun W, M.PH, Apt. Dr. T.N. Saifullah, M.Si., Apt.
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be conducted using several methods: Tutorial, where students will listen to the lecturer's explanation Discussion, where students will ask questions or answer questions about a problem. Project-based learning (Team-based Project), where students will be divided into several groups, then given a task to be completed together, and the completion of the task will be made in the form of a short report and presented to the lecturer and other students in the course. Case-based learning / PBL / other SCL methods, students will be given real problems in society, then asked to identify the root of the problem and try to find a solution (in accordance with the exposure in the lecture). 300 minutes per week for 14 weeks in one semester
Workload	:	300 minutes in the classroom, 300 minutes of structured activities, 300 minutes of weekly self-directed learning
Credits	:	6 Credits/10.2 ECTS
Prerequisites	:	Have taken at least 110 credits
Course Learning Outcomes (CLO)	:	 Able to evaluate good drug distribution methods in distribution facilities Able to develop marketing plans for pharmaceutical preparations and medical devices Able to compare distribution and marketing practices in terms of ethical and legal aspects Able to solve problems in the distribution and marketing of pharmaceutical preparations and medical devices Able to build communication with partners in the distribution and marketing of pharmaceutical preparations and medical devices

Distribution and Marketing Management (6 Credits/10.2 ECTS)

Description	:	The elective package course "Distribution and Marketing Management" is provided in the form of learning through lectures, internships, and comprehensive discussions. Overall, pharmaceutical distribution and marketing management discusses an introduction to drug distribution management and regulation, CDOB, process management and risk management in distribution, marketing concepts of pharmaceutical products, delivering and communicating value, strategic marketing management.
Examination Format/Assessment Methods	:	60% participatory activities and project, 20% midterm exam, 20% final exam
Learning Media	:	LMS (elok.ugm.ac.id)
Literature	:	 Primary : Pedoman Teknis Cara Distribusi Obat yang Baik Kotler, P., Keller, K.L, 2012, Marketing Management 14 Ed, Prentice Hall Porter, ME., 2007, Strategi Bersaing (terjemahan), Karisma Publishing Group Wheelen, TL., dan Hunger, JD., 2010, Strategic Management and Business Policy, 12 Ed, Pearson

Module 85: Traditional Medicine

Traditional Medicine (6 Credits/10.2 ECTS)

Advanced Pharmacy Practice		
Code/Status	: FAF 221708/Compulsory option	
Level	: Undergraduate	
Semester	: 6	
Course Coordinator/Lecturer	 Dr.apt. Andayana Puspitasari Gani, M.Si (Coordinator) Prof. Dr.rer.nat. apt. Triana Hertiani, M.Si. Prof. Dr. apt A. Karim Zulkarnaen, M.Si Dr.rer.nat.apt. Yosi bayu Murti, M.Si 	
Language	: Indonesian, English	
Teaching Method/Duration of Classes per Week for One Semester	: Learning will be conducted using SCL-Team-Based Project (TBP) method 300 minutes per week for 14 weeks in one semester	
Workload	: 300 minutes in the classroom, 300 minutes of structured activities, 300 minutes of weekly self-directed learning	
Credits	: 6 Credits/10.2 ECTS	
Prerequisites	: Have taken at least 110 credits	
Course Learning Outcomes (CLO)	 Students are able to apply the principles of traditional medicine preparation development Students are able to produce traditional medicine preparation designs Students are able to produce a design of a quality assurance system for traditional medicinal preparations Able to demonstrate/illustrate the registration process of traditional medicinal preparations 	
Description	: The elective package course "Traditional Medicine" discusses the scope of traditional medicine product design, ranging from new product development, production processes, quality assurance to product registration. The product development module discusses how new designs are made, market analysis, Good Manufacturing Practices (GMP) and related regulations. In the product module, the discussion emphasizes the selection of raw materials, composition, formulation, extraction technology, and packaging. In the quality assurance module, it discusses the implementation of a quality assurance system in the traditional medicine industry, GMP implementation, identification of raw materials to analysis of active ingredients in traditional medicine	

products. In this course package, the procedures for registration of traditional medicine products are also studied.

Examination Format/Assessment Methods	:	70% participatory activities and project, 30% exam
Learning Media	:	LMS (elok.ugm.ac.id)

Module 87: Thesis

Thesis (6 Credits/10,2 ECTS)

Advanced Pharmacy Practice		
Code/Status	:	FAF 221801/Compulsory
Level	:	Undergraduate
Semester	:	8
Course Coordinator/Lecturer	:	Dr. Purwanto, M.Si., Apt. Muhammad Novrizal Abdi Sahid, M.Eng., Ph.D. Apt.
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	 SCL: learning by method of Case-based learning/Project Will be carried out using the method: 1. Tutorial and Discussion, where students will listen to the lecturer's explanation and discuss issues related to the material provided 2. Case-based Project-based learning, where students will be given a case to be solved by team of student and the results will be presented in front of the lecturer and other students 660 minutes per week for 14 weeks in one semester
Workload	:	660 minutes per week for 14 weeks in one semester
Credits		6 Credits/10,5 ECTS
Prerequisites	:	Research Methods & Statistics in Pharmacy
Course Learning Outcomes (CLO)	:	 Students are able to create research designs Students are able to defend research designs Students are able to carry out research designs Students are able to interpret the research results obtained Students are able to defend research results Students are able to defend research results Students are able to make written reports on scientific studies carried out by paying attention to the rules for implementing and writing scientific reports
Description	:	This course facilitates students to carry out experimental research activities, social research, and literature studies related to the pharmaceutical field. The aim is to provide a real picture of the application of the knowledge gained during college. Apart from that, students will also practice writing down ideas about problems that still need to be addressed, providing suggestions for solutions and conducting research to test whether the proposed solutions can provide the right solution. This course will train students to systematically do all of this through preparing proposals, defending their proposed proposals, conducting research/studies on problem solving, and defending the results of problem solving findings.

Examination Format/Assessment Methods	:	50% Participative, 50% ProjectResults/Case Study Results/PBL Result
Learning Media	:	All material related to the thesis carried out Offline and online percentages can be adjusted according to the type of thesis being worked on
Literature	:	 Decree on the 2022 Undergraduate Study Program Curriculum Academic guide for the Undergraduate Study Program in 2021 Final assignment writing guide in 2023

Module 94: Students Service Learning

Students ervice Learning(4 Credits/6,8 ECTS)

Advanced Pharmacy Practice		
Code/Status	:	UNU 222001/Compulsory
Level	:	Undergraduate
Semester	:	VIII
Course Coordinator/Lectu rer	:	all DPLs and the UGM KKN PPM Regional Coordinator who are assigned by the Rector's Decree, approximately 250 DPLs per year
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	Team Based Project Learning, Case Based Method carried out over a period of 2 (two) months, with each student required to complete at least 288 (two hundred eighty-eight) effective working hours
Workload	:	carried out over a period of 2 (two) months, with each student required to complete at least 288 (two hundred eighty-eight) effective working hours
Credits	:	10 Credits/170 ECTS
Prerequisites	:	Has completed 100 credit hours without an E grade and is not currently enrolled in any courses
Course Learning Outcomes (CLO)	:	 1.students Capable of applying methods to design and analyze community empowerment. 2.students Able to analyze and design empowerment programs 3.Capable of implementing empowerment programs based on local potential and wisdom 4.Able to compile program performance accountability reports accountability-based empowerment program
Description	:	Students service Learning at Gadjah Mada University is a mandatory course for students at Gadjah Mada University. It involves living with the community and carrying out interdisciplinary community empowerment activities. students Service Learning is part of the educational process at Gadjah Mada University with the aim of enhancing students' empathy and concern, implementing applied knowledge and technology, teamwork, and interdisciplinary approaches, instilling personal values, improving national competitiveness, and fostering a research-oriented mindset.

Module 97. Structure Elucidation

Structure Elucidation (2 Credits/3.4 ECTS)

Advanced Pharmacy Practice		
Code/Status	: FAFP221001/elective	
Level	: Undergraduate	
Semester	: Minimum in semester 3	
Course	: 1. Prof. Dr. apt. Ratna Asmah Susidarti, M.S. (Koordinator)	
Coordinator/Lecturer	2. Prof. Dr.rer.nat. apt. Raden Rara Endang Lukitaningsih, M.Si.	
	3. Prof. Dr. Ritmaleni	
	4. Dr. Artania Adnin Tri Suma, M.Si.	
Language	: Indonesian, English	
Teaching	: Tutorials, discussions/exercises, and assignments	
Method/Duration of Classes per Week for One Semester	100 minutes per week for 14 weeks in one semester	
Workload	: 100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning	
Credits	2 Credits/3.4 ECTS	
Prerequisites	:	
Course Learning Outcomes (CLO)	 After completing this course, students are expected to be able to: 1. UV & IR Spectroscopy 2. Mass Spectroscopy 3. NMR Spectroscopy 4. NMR Spectroscopy 	
Description	 The Structure Elucidation course discusses the basic problems of UV, IR, NMR spectroscopy, and mass spectroscopy for determining the chemical structure of a compound. 	
Examination Format/Assessment Methods	: Project 60%, midterm exam 20%, final exam 20%	
Learning Media	: <u>https://elok.ugm.ac.id</u> Offline Course: 100 %	
Literature	 Main: Pavia, D., Lampman, G.M., and Kriz, G.S., 2001, Introduction to Spectroscopy :A Guide for Student of Organic Chemistry, W.B. third ed., Sauders Company, London Silverstein RM, Webster FX., 1998, Spectrometric Identification of Organic Compounds, 6th edition, John Wiley & Sons, New York McLafferty FW., 1980, Interpretation of Mass Spectra, Mill Valey, University Science Books, California

- 7. Synthesis of Boron containing compound (CCB-2) based on curcumin structure and its cytotoxic effect against cancer cells, 2020, Journal of Applied Pharmaceutical Science, 10(2):060-066,

Date of last amendment: August 8th, 2022

Code/Status	: FAFP221003/elective
Level	: Undergraduate
Semester	: Minimum in semester 3
Course	: Prof. Dr. Erna Prawita Setyowati, MSi., Apt. (coord)
Coordinator/Lecturer	Dr.rer.nat. Yosi Bayu Murti, MSi., Apt.
	Prof. Dr.rer.nat. Triana Hertiani, MSi., Apt.
Language	: Indonesian, English
Teaching	: Learning will be carried out using several methods:
Method/Duration of	1. Tutorial, where students will listen to the lecturer's explanation
Classes per Week for One Semester	Discussion, where students will ask questions or answer questions about a problem
	3. Project-based learning (Team-based Project), where students will be
	divided into several groups, then given a task to be completed
	together, and the completion of the task will be made in the form of a
	short report and presented to the lecturer and other students in the course.
	100 minutes per week for 14 weeks in one semester
Workload	: 100 minutes in the classroom, 100 minutes of structured activities, 100
Workloud	minutes of weekly self-directed learning
Credits	: 2 Credits/3.4 ECTS
Prerequisites	: FAF 2021
Course Learning	: 1. Students are able to explain the sources of efficacious substances and
Outcomes (CLO)	efficacious supporters that come from the sea.
	2. Students are able to explain the diversity of structures, biosynthesis
	pathways, isolation and production strategies of natural compounds from the sea.
Description	: This course is an elective course for students of the Pharmaceutica
·	Science Study Program which provides knowledge about marine
	medicinal materials including marine biota including sources of natura
	materials for medicines, characteristics of marine natural compound
	and their applications and general principles of extraction and isolation
	procedures for marine natural compounds, as well as strategies for the
	production of marine natural materials in the future.
Examination	: Task/quiz 10%, midterm exam 45%, final exam 45%
Format/Assessment	
Methods

Module 101. Drug Interactions

Drug Interactions (2 Credits/3.4 ECTS)

Advanced Pharmacy Practice		
Code/Status	: FAFP221004/elective	
Level	: Undergraduate	
Semester	: Minimum in semester 3	
Course	: Dr. apt. Purwantiningsih, M.Si. (Coord)	
Coordinator/Lecturer	Dr. apt. Fita Rahmawati, Sp.FRS.	
	apt. Arief Rahman Hakim, M.Si.	
	apt. Dr. Soni Siswanto, M.Biomed	
Language	: Indonesian, English	
Teaching	: SCL: Case-based learning and research-based learning	
Method/Duration of Classes per Week for One Semester	100 minutes per week for 14 weeks in one semester	
Workload	: 100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning	
Credits	: 2 Credits/3.4 ECTS	
Prerequisites	: Pharmacology II	
Course Learning Outcomes (CLO)	: 5. Able to explain the mechanism of pharmacodynamic interactions, pharmacokinetics, and principles of clinical management of drug interactions.	
	 Able to explain the mechanism and management of drug interactions with food and drug interactions with herbs. Able to explain the mechanism and management of parenteral preparation incompatibilities. 	
Description	: This course begins with an overview and mechanism of drug interactions, followed by the mechanism of drug interactions in the absorption and distribution process, drug interactions in the metabolism and excretion process, pharmacodynamic interactions, drug interactions with food, drug interactions with herbs, clinical management of drug interactions, specific drug-drug interactions: mechanisms and management, and parenteral preparation incompatibilities.	
Examination Format/Assessment Methods	: Project 30%, midterm exam 35%, final exam 35%	
Learning Media	: <u>https://elok.ugm.ac.id</u> Offline Course: 90 %; Online: 10%	
Literature	: Main:

Module 104. Natural Corigen

Natural Corigen (2 Credits/3.4 ECTS)

Advanced Pharmacy Pra	nctice
Code/Status	: FAFP221007/elective
Level	: Undergraduate
Semester	: Minimum in semester 3
Course Coordinator/Lecturer	 1. apt. Purwanto, M.Sc., Ph.D 2. Dr. Sylvia Utami TP, M.Si. 3. Dr. apt. Puguh Indrasetiawan, M.Sc.
Language	: Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	 SCL: Project-based learning (Team-based Project/case-based learning/PBL) 100 minutes per week for 14 weeks in one semester
Workload	: 100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning
Credits	: 2 Credits/3.4 ECTS
Prerequisites	:
Course Learning Outcomes (CLO)	 8. Students are able to explain the applicable guidelines and regulations regarding the use of natural additives in pharmaceutical preparations. 9. Students are able to analyze and apply natural aroma substances in pharmaceutical preparations. 10. Students are able to analyze and apply natural flavoring substances in pharmaceutical preparations. 11. Students are able to analyze and apply natural coloring agents in pharmaceutical preparations.
Description	: This course discusses the scope of the use of natural materials as additional materials in pharmaceutical preparations, as dyes, flavors, and fragrances. The topics to be discussed include related regulations, mechanisms as corigens, types, physical and chemical properties, identification and quantification methods, and reviews of stability in preparations and side effects in the body. In this course, students are also asked to design herbal-based health drink/food formulas using natural flavor, aroma, and color additives.
Examination Format/Assessment Methods	: Project 50%, midterm exam 50%
Learning Media	: <u>https://elok.ugm.ac.id</u> Offline Course: 75 %; Online: 25%

Module 110: Technology Process Industry PharmaceuticaL

Advanced Pharmacy Pra	actice
Code/Status	: FAFP221013/elective
Level	: Undergraduate
Semester	: Minimum in semester 5
Course Coordinator/Lecturer	 1. Dr. T.N. Saifullah, Apt (Coor) 2. Dr. Eng. Khadijah, M.Si., Apt
Language	: Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	: SCL: Pembelajaran berbasis <i>Project (Team-based Project)</i> 100 minutes per week for 14 weeks in one semester
Workload	: 100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning
Credits	2 Credits/3.4 ECTS
Prerequisites	: none
Course Learning Outcomes (CLO)	 16. Students learn the basic principles of energy and mass transfer used in pharmaceutical industry processes, and drying and heat transfer processes. 17. Students can understand and utilize the concepts of filtration, particle and powder mixing, particle size reduction, micromiretics, and corrosion.
Description	: Overall, the Pharmaceutical Industry Process Technology course contains material on the various main processes carried out in producing pharmaceutical products in the pharmaceutical industry.
Examination Format/Assessment Methods	: 50% Project, midterm exam 25%, final exam 25%
Learning Media	: <u>https://elok.ugm.ac.id</u> Luring: 60%; Daring: 40%
Literature	 Main: 42. Anthony J. Hikey & David Ganderton, 2010, Pharmaceutical Process Engineering, Vol. 195, 2nd Ed., Informa Healthcare Inc., New York. 43. Note: Includes reference sources for the form of integration of Research and/or PkM into courses.

Module 112: Virus and Antiviral Drugs

Virus and Antiviral Drugs (2 Credits/3.4 ECTS)

Advanced Pharmacy Pra	actice
Code/Status	: FAFP221015/elective
Level	: Undergraduate
Semester	: Minimum in semester 5
Course Coordinator/Lecturer	 3. Apt. Puguh Indrasetiawan, M.Sc., Ph.D. (coordinator) 4. Dr. Apt. Soni Siswanto, M.Biomed.
Language	: Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	: SCL: Pembelajaran berbasis <i>Project (Team-based Project)</i> 100 minutes per week for 14 weeks in one semester
Workload	: 100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning
Credits	: 2 Credits/3.4 ECTS
Prerequisites	 none, but there is no D/E grade in the following courses: Molecular Biology (FAF221201) Pharmaceutical Biochemistry (FAF221103) Cell Biology and Microbiology (FAF221105) Immunology (FAF221510)
Course Learning Outcomes (CLO)	 18. Students are able to understand viruses and their general characteristics. 19. Students are able to understand, interpret and compare diseases caused by viruses and understand the body's response to viruses. 20. Students are able to compare ways of detecting viruses on biological samples 21. Students are able to choose the type of therapy for infectious diseases caused by viruses
Description	: Virology studies and understands viruses, their characteristics, life cycles and their role in the spread of disease in general. Various virus detections currently available are studied in this course. The selection of appropriate therapy based on viral infection and the molecular target of the drug is also an important part to study.
Examination Format/Assessment Methods	: 60% Project, 40% quiz.

Module 113: Functional Gene Analysis

Advanced Pharmacy Practice Code/Status : FAFP221016/elective Level Undergraduate : Semester : 4-8 1. Prof. Dr.rer.nat. apt. Adam Hermawan, M.Sc. (AH), coordinator Course 2. Dr. apt. Setyowati Triastuti Utami, M.Sc. (STU) Coordinator/Lecturer 3. Dr. Sci. apt. Rohmad Yudi Utomo, M.Sc. (RYU) 4. Lecturers from outside the faculty of pharmacy UGM Indonesian, English Language Learning will be carried out using several methods: Teaching 1. Tutorial, where students will listen to the lecturer's explanation Method/Duration of 2. Case-based learning/PBL/other SCL methods, students will be given Classes per Week for real problems in society, then asked to identify the root of the One Semester problem and try to find a solution (according to the explanation in the lecture) 3. Practice analysing data with software or databases 100 minutes per week for 14 weeks in one semester 100 minutes in the classroom, 100 minutes of structured activities, 100 Workload minutes of weekly self-directed learning 2 Credits/3.4 ECTS Credits : Molecular Biology (FAF221201) Prerequisites : Study basic principles in functional genomics, emphasising the Course Learning : Outcomes (CLO) transcriptome and proteome, the contribution of functional genomics to biological systems and drug target development as well as socio-ethical aspects of functional genomics in biomedicine and biotechnology, including perspectives on genetic risk information.genes, gene editing, challenges gene therapy 2. Study Next generation high throughput (HTP) sequencing technology, microarray technology, protein separation (2D-PAGE, 2D-LC) and mass spectrometry (MALDI-TOF, ESI-MS) 3. Mastering Computing for functional genomic analysis in drug development and databases for gene Ontology and biological Pathway-Based Analysis, DNA/RNA-protein interactions, and Protein-protein interactions With the advent of high-throughput DNA sequencing technology, Description • complete genome sequences of many organisms are being deciphered and analysed, but the ability to understand the cellular function of most

of the identified genes remains a challenge. The Functional Gene

Functional Gene Analysis (2 Credits/3.4 ECTS)

Analysis course aims to provide a comprehensive approach to understanding genome function, to develop and promote high throughput and large-scale approaches to investigate genome function, genome products, and interactions between the two. This course will provide an overview of the concept of functional genomics and contemporary approaches used to understand genome function. Specifically, this course studies the basic principles of functional genomics, emphasising the transcriptome and proteome, the contribution of functional genomics to biological systems and drug target development, socio-ethical aspects of functional genomics in biomedicine and biotechnology, including perspectives on genetic risk information, next generation high throughput (HTP) sequencing technology, microarray technology, protein separation (2D-PAGE, 2D-LC), mass spectrometry (MALDI-TOF, ESI-MS), protein structure analysis (X-ray crystallography, NMR), molecular imaging and computing for functional genomics analysis in drug development.

Module 114: Analysis of Macromolecular Pharmaceutical Products

Code/Status	:	FAFP221017/elective
Level	:	Undergraduate
Semester	:	3
Course Coordinator/Lecturer	:	 Dr. apt. Muthi Ikawati, M.Sc. (coordinator) Dr. apt. Riris Istighfari Jenie, M.Si. Dr.rer.nat. apt. Siti Nurul Hidyah, M.Sc. Dr. Endah Puji Septisetyani, M.Sc. (BRIN)
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be carried out using two methods, namely: 1. Tutorials and discussions: lectures begin with lecturer explanations and are followed by questions and answers with students. 2. Project-based learning (team-based project): students are divided into small groups (minimum 4 groups; maximum members 5/group), each group is accompanied by a lecturer who composes a popular scientific article related to one of the macromolecular pharmaceutical products which includes a description (meeting 4th), purification (7th meeting), analysis techniques (12th meeting), and results of research development (15th lecture meeting). The draft articles were presented briefly at the end of the lecture meeting mentioned above. Articles are finalized and approved by the lecturer no later than 1 week after the UAS and can be published on the UGM Pharmacy Knowledge Channel if deemed appropriate.
		100 minutes per week for 14 weeks in one semester 100 minutes in the classroom, 100 minutes of structured activities, 100
Workload	:	minutes of weekly self-directed learning
Credits	:	2 Credits/3.4 ECTS
Prerequisites	:	none
Course Learning Outcomes (CLO)	:	 classify (classify-understand) various kinds of macromolecular pharmaceutical products and explain (explain-understand) the outline of their production and use (use-apply) basic knowledge related to the structure of proteins and nucleic acids for secondary and tertiary structure analysis of drug proteins. explain (explain-understand) the basic principles of purification of macromolecular products and the application of HPLC-MS for their

Analysis of Macromolecular Pharmaceutical Products (2 Credits/3.4 ECTS)

binding assay, and use them (use-apply) in interpreting data resulting from these test methods.

- 4. explain (explain-understand) the basic principles of cell-based assays in macromolecular product development research and the application of macromolecular pharmaceutical product analysis techniques in vaccine and biosimilar drug development research, as well as use them (use-apply) in interpreting data generated in these researches.
- The development of various macromolecular pharmaceutical preparation Description : products requires the development of analytical methods to guarantee the quality of these preparations. The Macromolecular Pharmaceutical Product Analysis course studies the analytical methods used to analyze macromolecular pharmaceutical products including drugs, cosmetic preparations, health supplements, vaccines, xenobiotics in the form of proteins, peptides, and DNA/RNA (nucleic acids). In this course students will learn about the types of macromolecular pharmaceutical products, the structure of proteins and nucleic acids, instrumental techniques for analyzing macromolecular pharmaceutical products such as size exclusion chromatography, sodium dodecyl sulphate - polyacrylamide gel electrophoresis (SDS-PAGE), binding assavs used in pharmacopoeial-based testing for drug proteins, applications of various techniques used for pharmacopoeial-based testing include ELISA, radio-immunoassay (RIA), polymerase chain reaction (PCR), capillary electrophoresis, fingerprinting with HPLC/HPLC-MS, Edman reaction ; methods for detecting secondary and tertiary structures of drug proteins, as well as cell-based assays.

Examination Format/Assessment Methods		0% Participatory activities, 40% Project, 25% midterm exam, 25% final kam

Module 119: Biomedical instrumentation

Code/Status	: FAFP221022/elective		
Level	Undergraduate		
Semester	: Even		
Course Coordinator/Lecturer	 Prof. Dr. apt. Edy Meiyanto, M.Si. (coordinator) Muhammad Novrizal Abdi Sahid, M.Eng., Ph.D., Apt. Dr. Sci. apt. Rohmad Yudi Utomo, M.Sc. Prof. Drs. Gede Bayu Suparta, M.S., Ph.D. (FMIPA) 		
Language	: Indonesian, English		
Teaching Method/Duration of Classes per Week for One Semester	 Learning will be carried out using several methods: Tutorial, where students will listen to the lecturer's explanation Discussion, where students will ask questions or answer question about a problem Project-based learning (Team-based Project), where students will be divided into several groups, then given an assignment to complet together, and the completion of the assignment will be made in the form of a short report and presented to the lecturer and other students in the course. Case-based learning/PBL/other SCL methods, students will be give real problems in society, then asked to identify the root of the problem and try to find a solution (according to the explanation in the lecture) 		
Workload	 100 minutes per week for 14 weeks in one semester 100 minutes in the classroom, 100 minutes of structured activities, 10 minutes of weekly self-directed learning 		
Credits	: 2 Credits/3.4 ECTS		
Prerequisites	none		
Course Learning Outcomes (CLO)	 understand the scope of biological instruments and the principles immunofluorescence in biomedical sample analysis applications explains various techniques and applications of biological instrumen such as microscopes, flow cytometry, PCR, and microarrays explains the principles of accelerator-based instruments and the application to biomedical sample detection explains several accelerator-based instrument techniques such as PE SPECT, TEM, SEM, BNCT, and MRI and biomedical sample detection applications 		
Description	Biomedicine is a science that combines various sciences in pharmacy ar medicine, including biochemistry, cell and molecular biology, as well a pathophysiology, to understand human health and disease. The		

Biomedical instrumentation (2 Credits/3.4 ECTS)

	Biomedical Equipment course covers innovation in the fields of science pharmacy and technology for the development of instrumentation us in health services, especially diagnostic equipment based on examini macromolecular markers. This course prepares students to understa the types, validation systems and operational standards of t instruments used. The topics discussed are the types and worki principles of instruments used for nucleotide and protein-based mark detection, critical points for each instrument, how to validate ea instrument, and troubleshooting each instrument. The instrumer discussed include sample preparation equipment, sample carrier a storage equipment, molecular diagnostic kits, microscopes, ELI readers, and PCR.
Examination Format/Assessment Methods	: 20% Assignment, 40% midterm exam, 40% final exam

Course Learning Outcomes (CLO)	 Students are able to identify problems related to lifestyle and the factors that influence them with a cross-disciplinary approach Students are able to design alternative solutions to problems related to healthy lifestyles in society through a cross-disciplinary approach 	
Description	: This course is an interdisciplinary elective course offered in the Health Nutrition, Pharmacy and Psychology Undergraduate Study Program which has taken at least the first 3 semesters in each study program. This course is given in the form of lectures from lecturers and practitioners, emphasizing case and project based learning in the form of discussions of real problems in society related to healthy lifestyles, and is carried out in the form of a Focus Group Discussion. At the end of the lecture, the student group is expected to be able to produce a project related to solving this problem. Lectures will be held using the flip classroom method with eLOK and Zoom meetings as a medium for student discussion with lecturer supervision

Module 124 Nutrigenomics and nutraceuticals

Nutrigenomics and nutraceuticals (2 Credits/3.4 ECTS)

Advanced Pharmacy Pra	acti	ce
Code/Status	:	FAFP221027/elective
Level	:	Undergraduate
Semester	:	4
Course Coordinator/Lecturer	:	 Dr. apt. Rumiyati, M.Si. (coordinator) Prof. Dr. Dra. Sunarti, M.Kes. (FKKMK) apt. Marlyn Dian Laksitorini, M.Sc., Ph.D. Dr. Cintya Nurul Apsari, S.T.P., M.Si.
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be carried out using the method: Tutorials and discussions: lectures begin with lecturer explanations and are followed by questions and answers with students. Project-based learning (team-based project): students are divided into several groups, each group examines several scientific articles on different topics including nutrigenomics, nutragenetics and the development of nutraceuticals on ageing, cancer & gut health, infectious diseases & immune system, obesity & diabetes, heart disease & lipid metabolism, inflammatory bowel diseases, and presented at meetings 7 and 14. 100 minutes per week for 14 weeks in one semester
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning
Credits	:	2 Credits/3.4 ECTS
Prerequisites	:	none
Course Learning Outcomes (CLO)	:	 explain (explain-understand) the meaning of nutraceuticals, nutrigenomics, nutrigenetics and epigenetics, as well as the role of nutrients and explore the bioactive content in food ingredients as raw materials for nutraceuticals in maintaining health and supporting therapy. explain (explain-understand) nutrigenomics and nutrigenetics in obesity and diabetes, heart disease and lipid metabolism, inflammatory bowel diseases, adult neurogenesis and use (use-apply) formulation technology for the development of personalized nutraceuticals and for example in cancer and obesity and diabetes. explain (explain-understand) and interpret (use-apply) the results of the latest research on nutrigenomics and nutraceuticals from scientific articles related to pharmaceutical science.

Description	: This course studies the interaction between nutrients and bioactive ingredients in the diet on gene expression. The course will discuss the meaning of nutraceuticals, nutrigenomics, nutrigenetics and epigenetics; the important role of nutrients and bioactive ingredients in maintaining health and supporting therapy; exploration of sources of bioactive ingredients in nutraceuticals and their molecular mechanisms of action; the molecular mechanisms of nutraceuticals in providing health benefits and their role in controlling diseases such as obesity and diabetes, heart disease and lipid metabolism, inflammatory bowel diseases, ageing, cancer, brain health, gut health and disease; The role of nutraceuticals in improving the immune system.

Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning
Credits	:	2 Credits/3.4 ECTS
Prerequisites	:	none
Course Learning Outcomes (CLO)	:	 Students can explain the types of pharmaceutical proteins, the classification of pharmaceutical proteins and the role of pharmaceutical proteins as a class of macromolecular drugs that need to be characterized and developed. Students can understand various methodologies that can be used in the production of pharmaceutical proteins Students can explain and compare various engineering strategies for proteins to produce good pharmaceutical protein products
Description	:	This course discusses the development of protein products as macromolecular drugs (protein pharmaceuticals), types of proteins used for therapy, approaches used for pharmaceutical protein engineering, recombinant protein expression as the main methodology in pharmaceutical protein production, pharmaceutical protein production using E. coli, yeast, mammalian cells and cell free methods. Apart from that, it also discusses protein engineering strategies that are currently developing to produce good pharmaceutical protein products, including glycosylation, PEGylation, lipidation, antibody drug conjugates, site specific mutagenesis, Fc fusion, etc.

Module 131: Terapi Gen

Terapi Gen (2 Credits/3.4 ECTS)

Advanced Pharmacy Pr	Advanced Pharmacy Practice		
Code/Status		FAFP221034/elective	
Level	:	Undergraduate	
Semester		4-8	
Course Coordinator/Lecturer	:	 Dr.rer.nat. apt. Adam Hermawan, M.Sc. (AH), coordinator Dr. apt. Setyowati Triastuti Utami, M.Sc. (STU) Dr. apt. Dyaningtyas Dewi Pamungkas Putri, M.Sc. (DDPP) 	
		4. Lecturers from outside the faculty of Pharmacy UGM	
Language	:	Indonesian, English	
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be carried out using several methods: Tutorial, where students will listen to the lecturer's explanation Discussion, where students will ask questions or answer questions about a problem Project-based learning (Team-based Project), where students will be divided into several groups, then given an assignment to complete together, and the completion of the assignment will be made in the form of a short report and presented to the lecturer and other students in the course. 	
Workload	:	100 minutes per week for 14 weeks in one semester100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning	
Credits	•	2 Credits/3.4 ECTS	
Prerequisites	:	Molecular Biology (FAF221201)	
Course Learning Outcomes (CLO)	:	 explaining (understanding) the basic concepts of gene therapy related to pharmaceuticals which includes an overview of gene therapy; vectors, gene preparation and design, gene editing, gene therapy challenges applying knowledge about gene therapy in pharmaceuticals, including for drug development and disease identification interpreting (evaluating) gene therapy research results from scientific articles related to pharmaceutical science 	
Description	:	This course discusses genetic mutations that cause pathological disorders in humans, target diseases for gene therapy, types of oligonucleotides	

: This course discusses genetic mutations that cause pathological disorders in humans, target diseases for gene therapy, types of oligonucleotides used for gene therapy (DNA, RNA, antisense), gene preparations used in gene therapy (including basic principles cloning), genome editing (including CRISPR-CAS9), gene transfer methods, in vivo antisense RNA production, examples of ex vivo-in vivo gene therapy applications, and antisense oligonucleotides as therapeutic agents.

Examination Format/Assessment Methods	: 30% Participatory activities, 70% project
Learning Media	: LMS (elok.ugm.ac.id)

Module 132: Stem cell therapy

Stem cell therapy (2 Credits/3.4 ECTS)

Advanced Pharmacy Pra	acti	ce
Code/Status	:	FAFP221035/elective
Level	:	Undergraduate
Semester	:	Minimum semester 4
Course Coordinator/Lecturer	:	 apt. Muhammad Novrizal Abdi Sahid, M.Eng., Ph.D. (coordinator) Prof. Dr. apt. Edy Meiyanto, M.Si. Dr. apt. Riris Istighfari Jenie, M.Si. Dr. apt. Nunung Yuniarti, M.Si. Dr. drg. Ferry Sandra
Language	:	Indonesian, English
Teaching Method/Duration of Classes per Week for One Semester	:	 Learning will be carried out using several methods: Tutorial, where students will listen to the lecturer's explanation Discussion, where students will ask questions or answer questions about a problem 100 minutes per week for 14 weeks in one semester
Workload	:	100 minutes in the classroom, 100 minutes of structured activities, 100 minutes of weekly self-directed learning
Credits	:	2 Credits/3.4 ECTS
Prerequisites	:	Can be taken by students of the health cluster, Faculty of Veterinary Medicine, and Faculty of Biology
Course Learning Outcomes (CLO)	:	 Explain the basic concept of mutations that result in genetic defects, ethics in stem cell and molecular therapy, and the basic principles and applications of gene therapy Understand the basic principles of development and application of stem cells for therapy of a disease or treatment
Description	:	The Stem Cell Therapy course discusses stem cells, how to obtain them, their use for disease therapy and the world of pharmacy. Methods that can be used for stem cell development/production will also be explained. Normative and ethical aspects of the use of stem cells in therapy will also be discussed.
Examination Format/Assessment Methods	:	30% Assignment, 35% midterm exam, 35% final exam
Learning Media	:
